Final Monologue

A 30-Minute Browser-Based Metaverse Experience

Click to Wear 2
Collection + Runway

Touch, the touch of Adam, or the message that came to Muhammad through the act of reading. These are gestures that appeal to the senses, forming the foundation of being human, and they are also the roots of the empirical knowledge we possess today. Touch, reading, wars, inventions, kingdoms, nations, stories. At the end of all of these, humankind has evolved into the era of the click. Knowledge once acquired through touch is now absorbed by tapping a digital screen or clicking a mouse. With a single click you can earn billions, lose everything, infect your computer with a virus and lose all your work, or by clicking and scrolling through what you read, possible to reconstruct yourself from scratch.

Humanity evolves from touch to click, from atom to code, transforming knowledge and identity. In that transmission phase, via design, C2W2 Runway tells a six-chapter story about our relationship with tech:

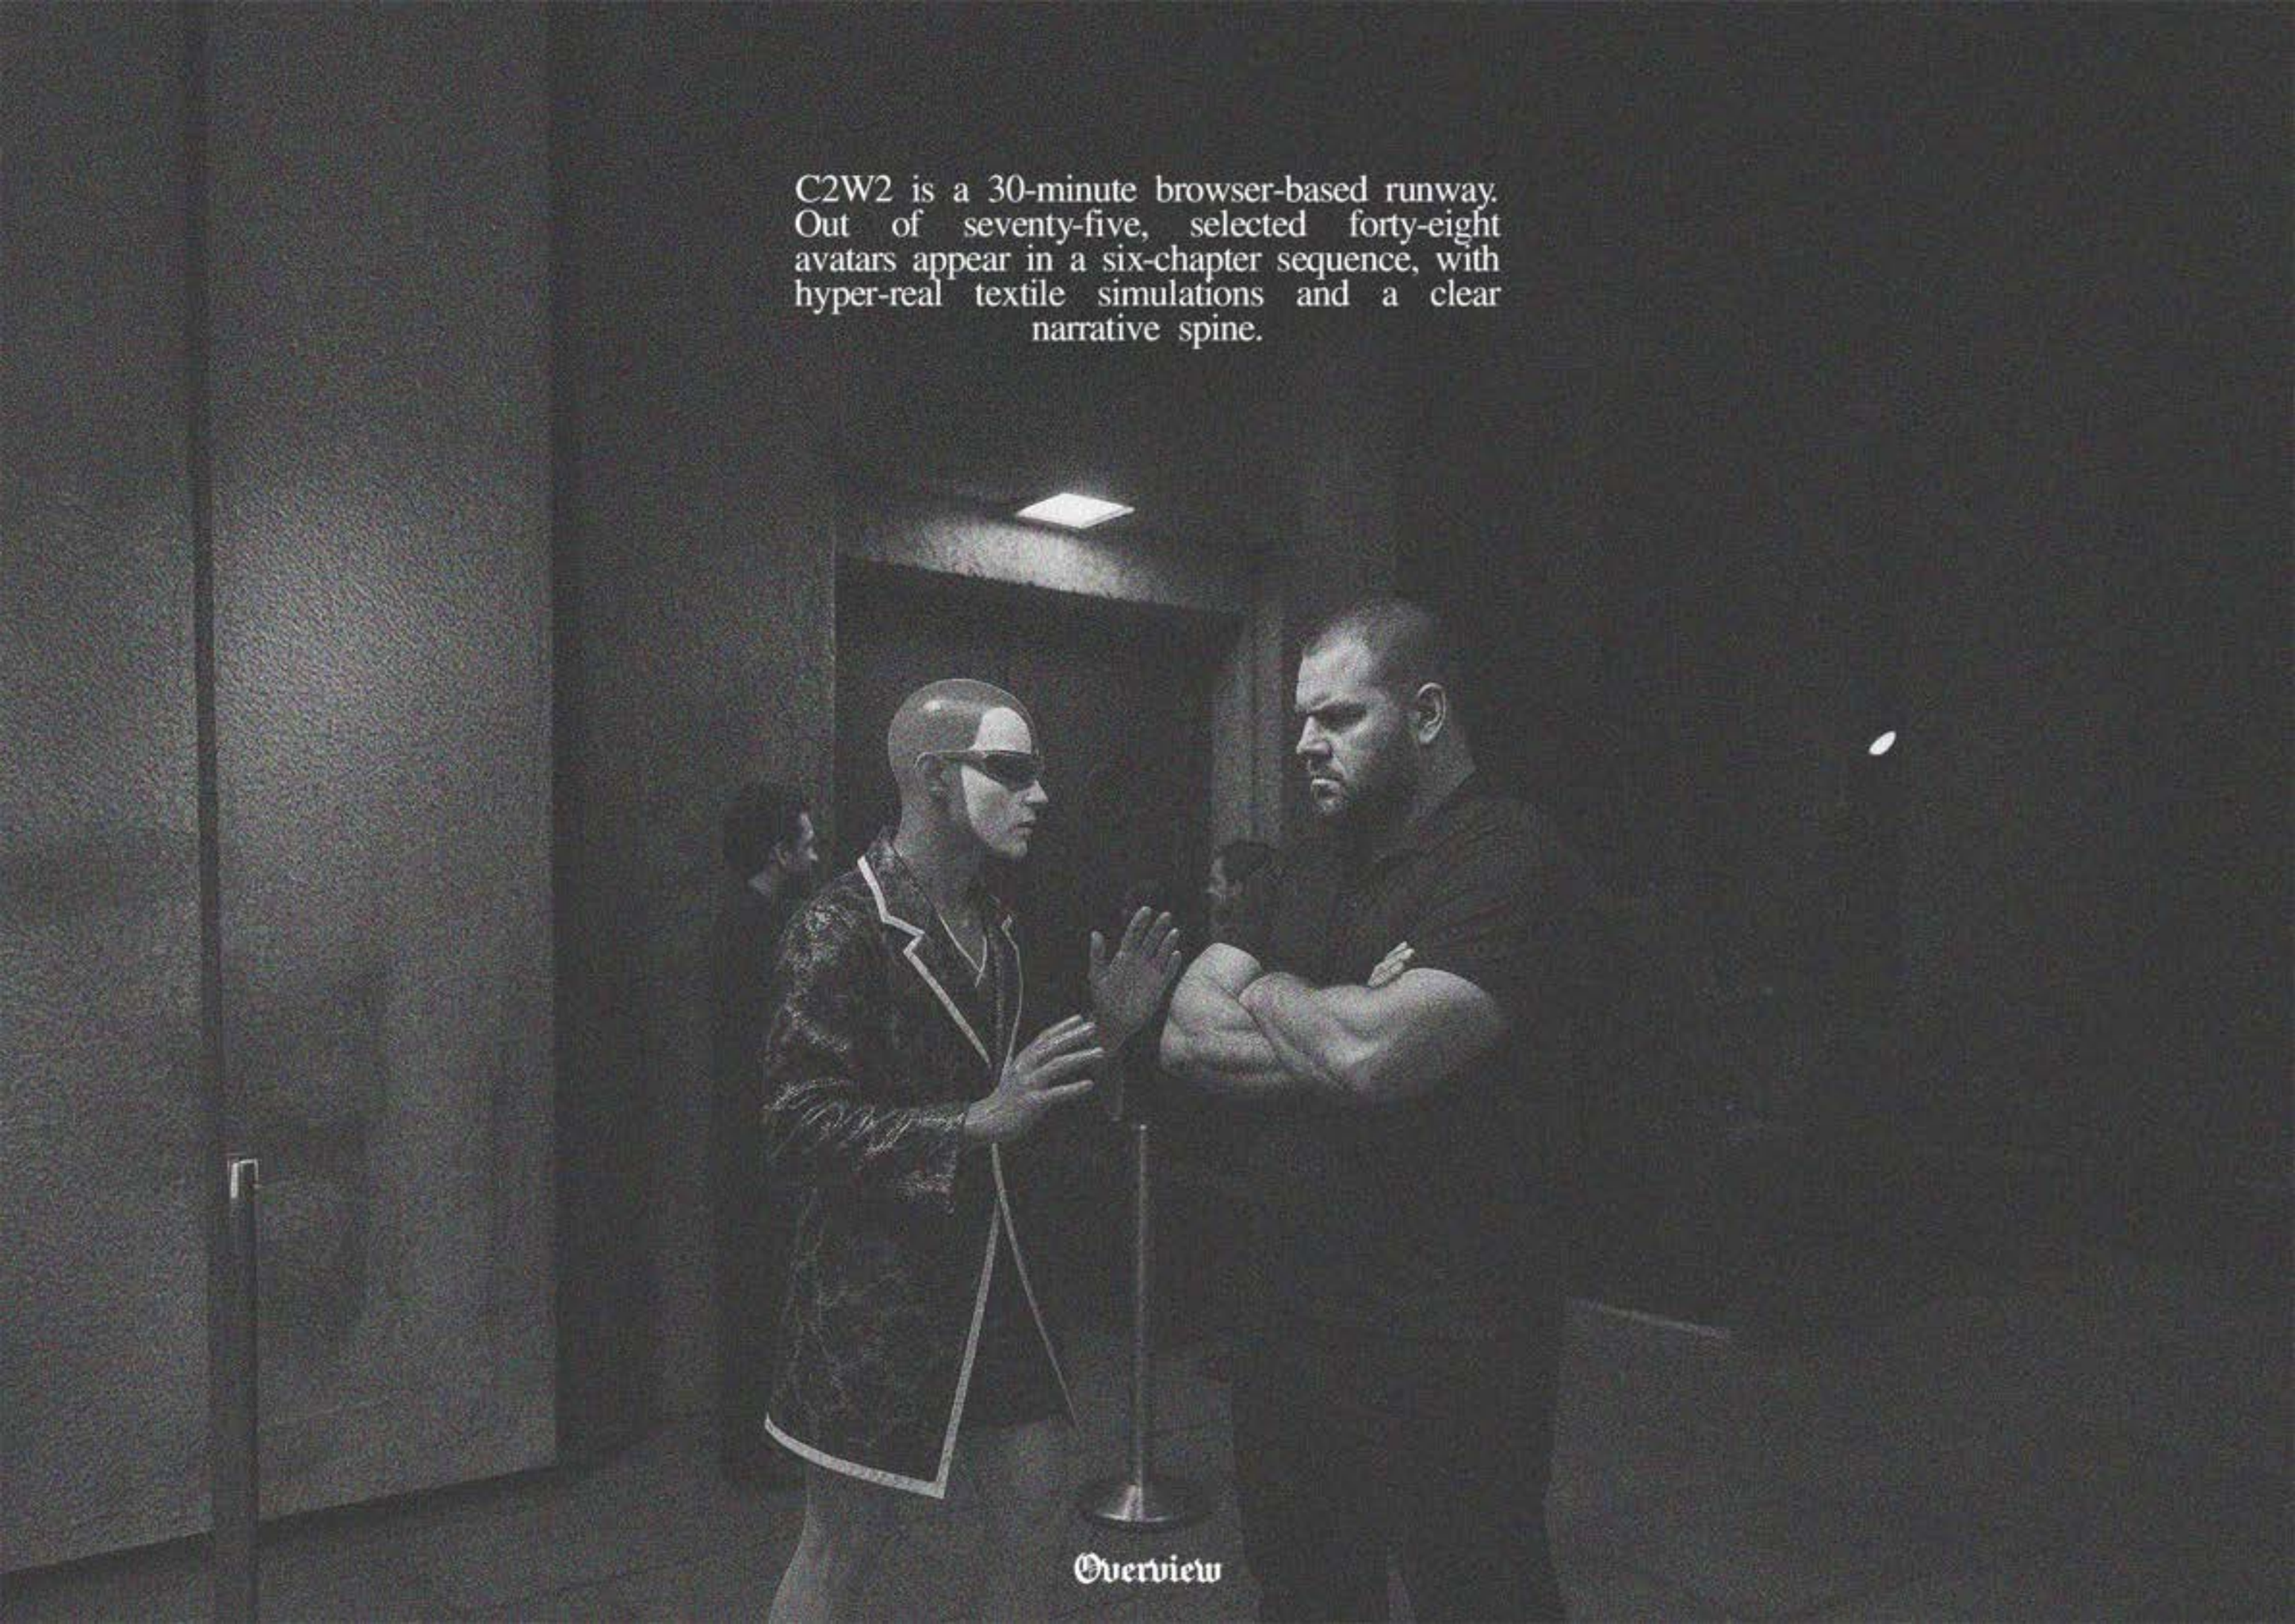

Concept Summary

how it first changes art,
then devalues it through mass production,
and finally forces a search for
new meaning and identity.

The click is the new biology.

C2W2 is a 30-minute browser-based runway. Out of seventy-five, selected forty-eight avatars appear in a six-chapter sequence, with hyper-real textile simulations and a clear narrative spine.

Overview

The work merges digital fashion, architecture, and performance into one continuous environment. Each chapter marks a step in the evolution of identity, material, and medium in virtual culture.

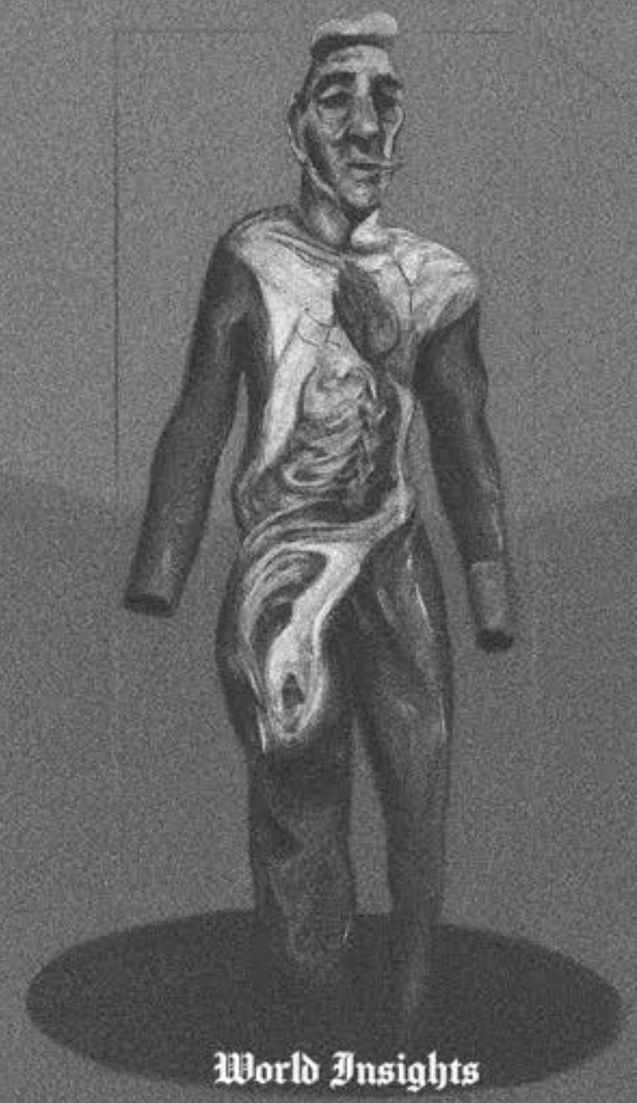

Overview

This 30-minute experience marks the first time ever that a metaverse experience itself has been directly minted (*not as a trailer or asset, but as the work in its entirety*) and can be watched straight from OpenSea or any browser window.

No download, no login.

The runway is a minted **.html** application on Ethereum. Through its *animation URL*, the show can be experienced in three different ways: a marketplace version with 3 fixed cameras, a desktop version that allows users to move freely during the show, and a VR version.
All three are packed into the same link.

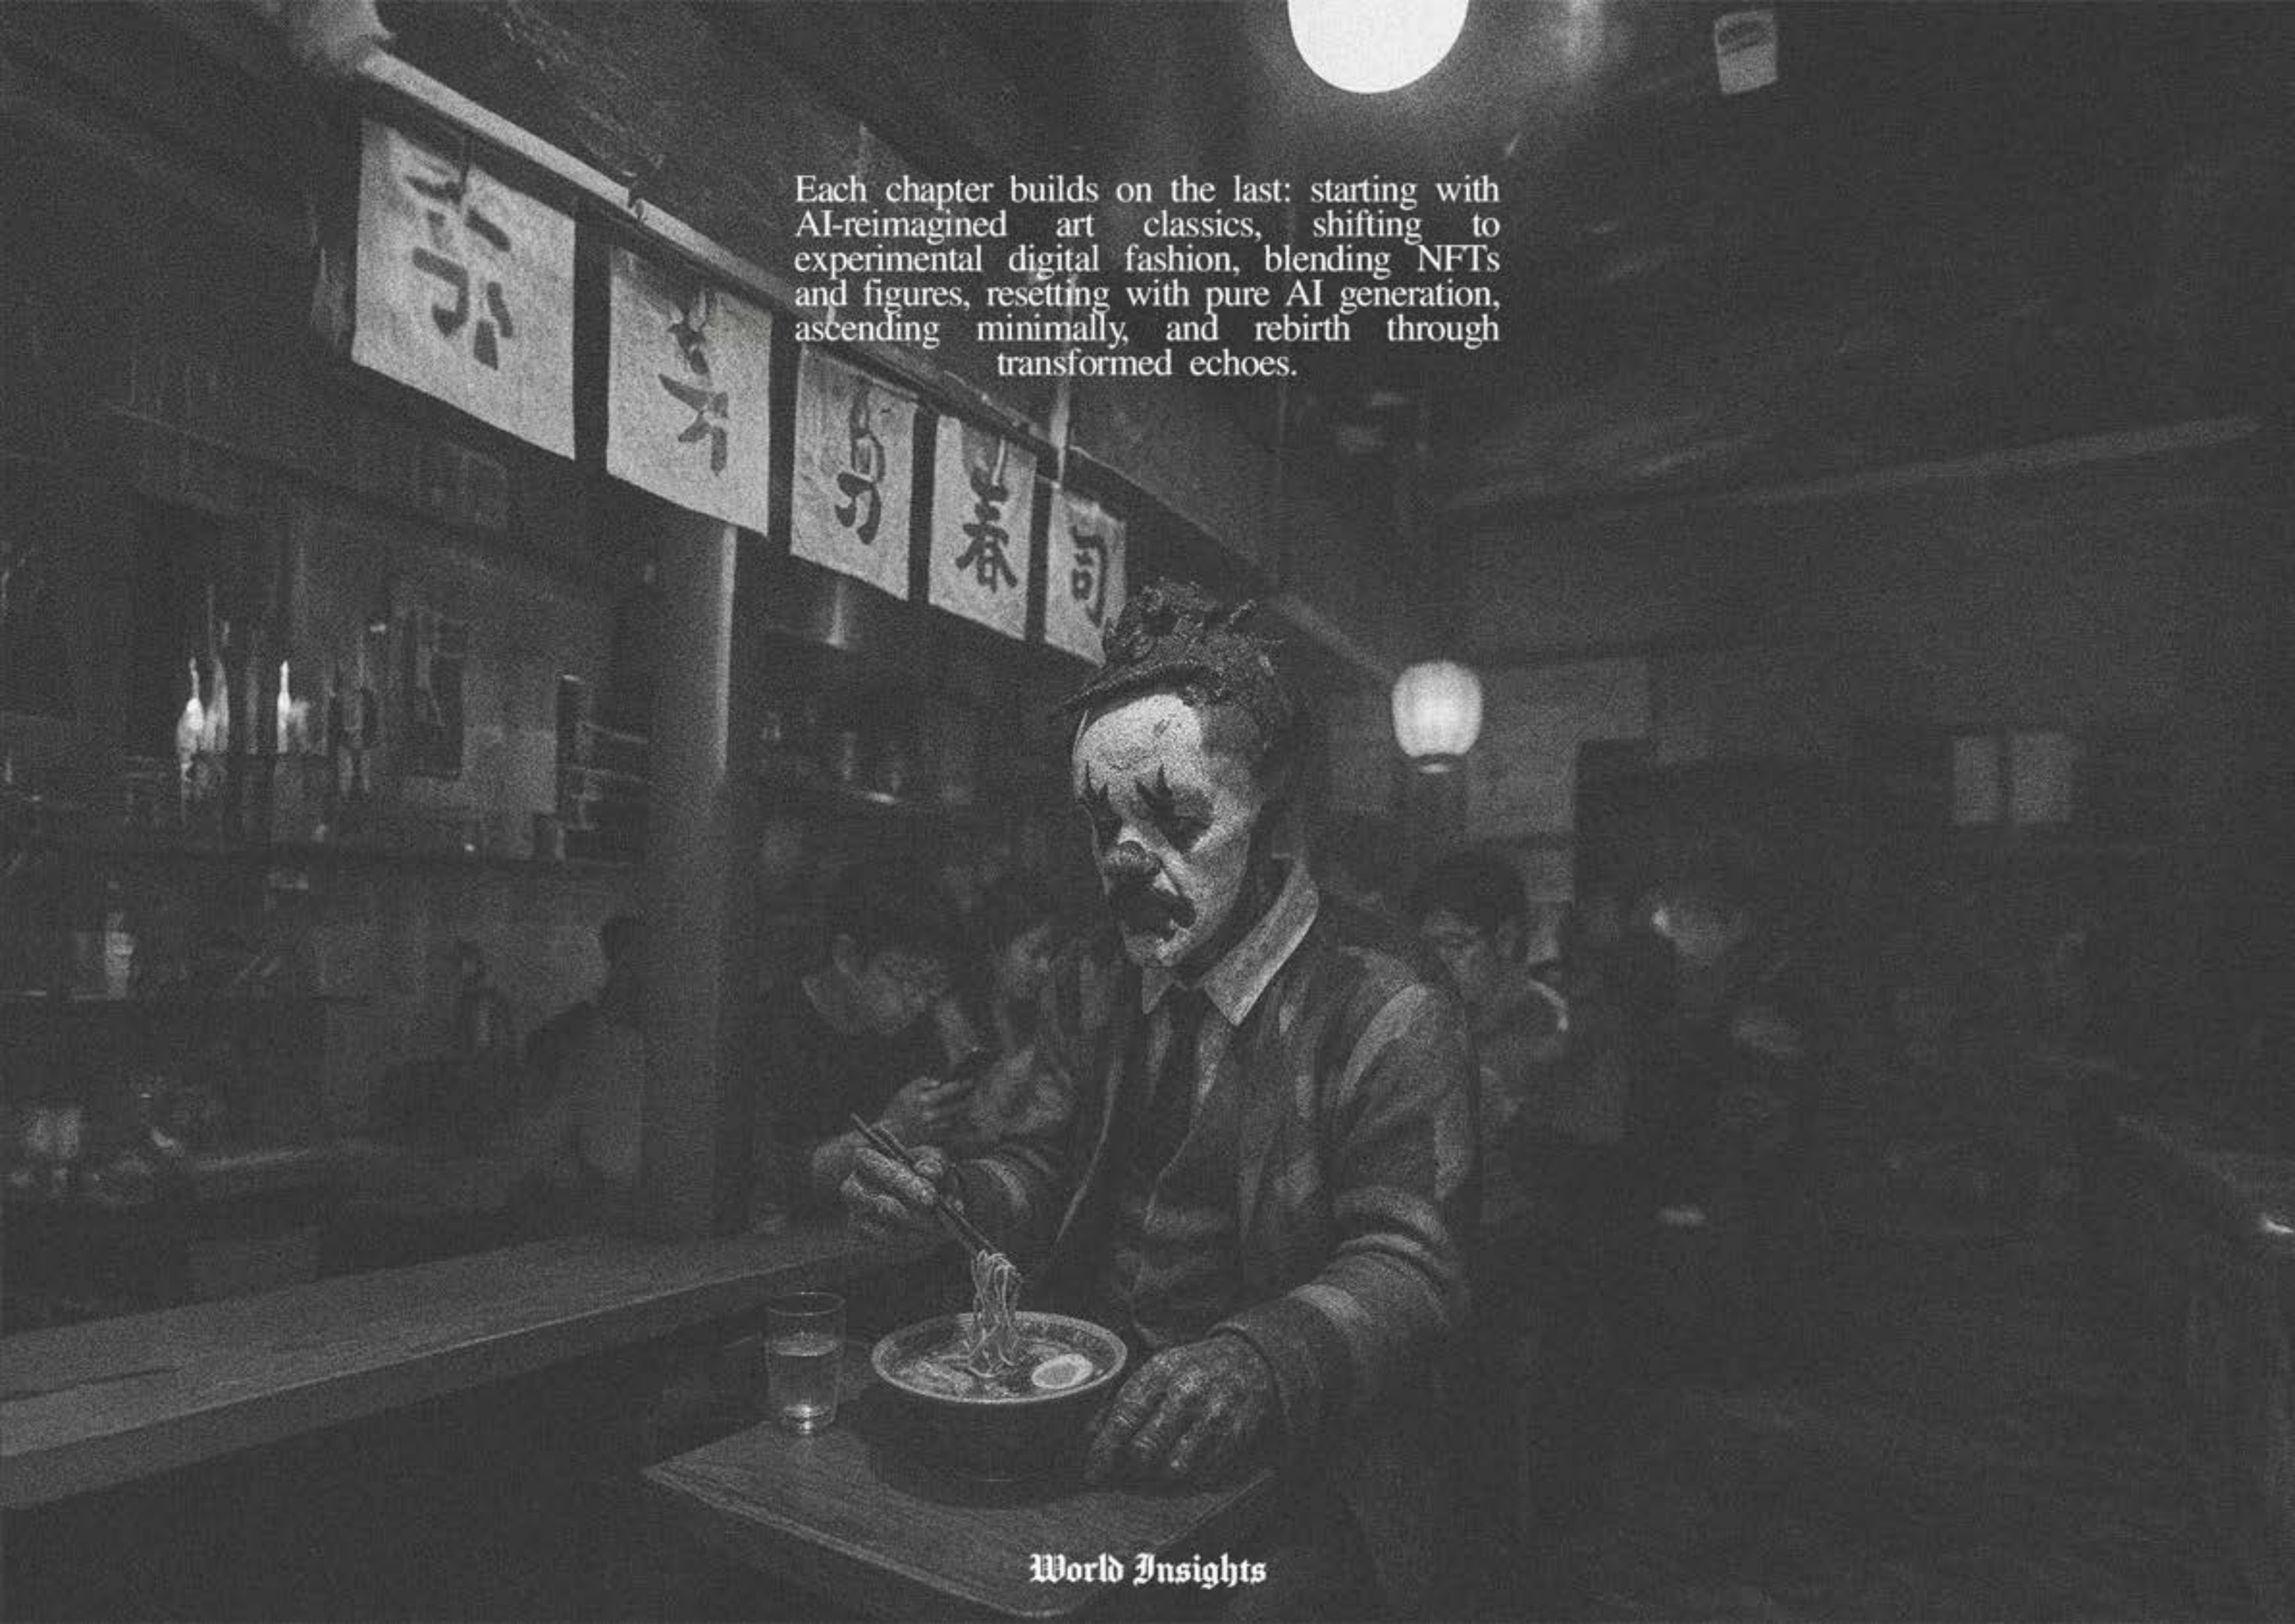

World Insights

The metaverse space is a minimalist, dark environment with dramatic circular lighting, evoking a digital void where avatars evolve. Avatars rotate 360 degrees and walk in 15 meter radius loops during 30 seconds each, and each has a central object related to the design.

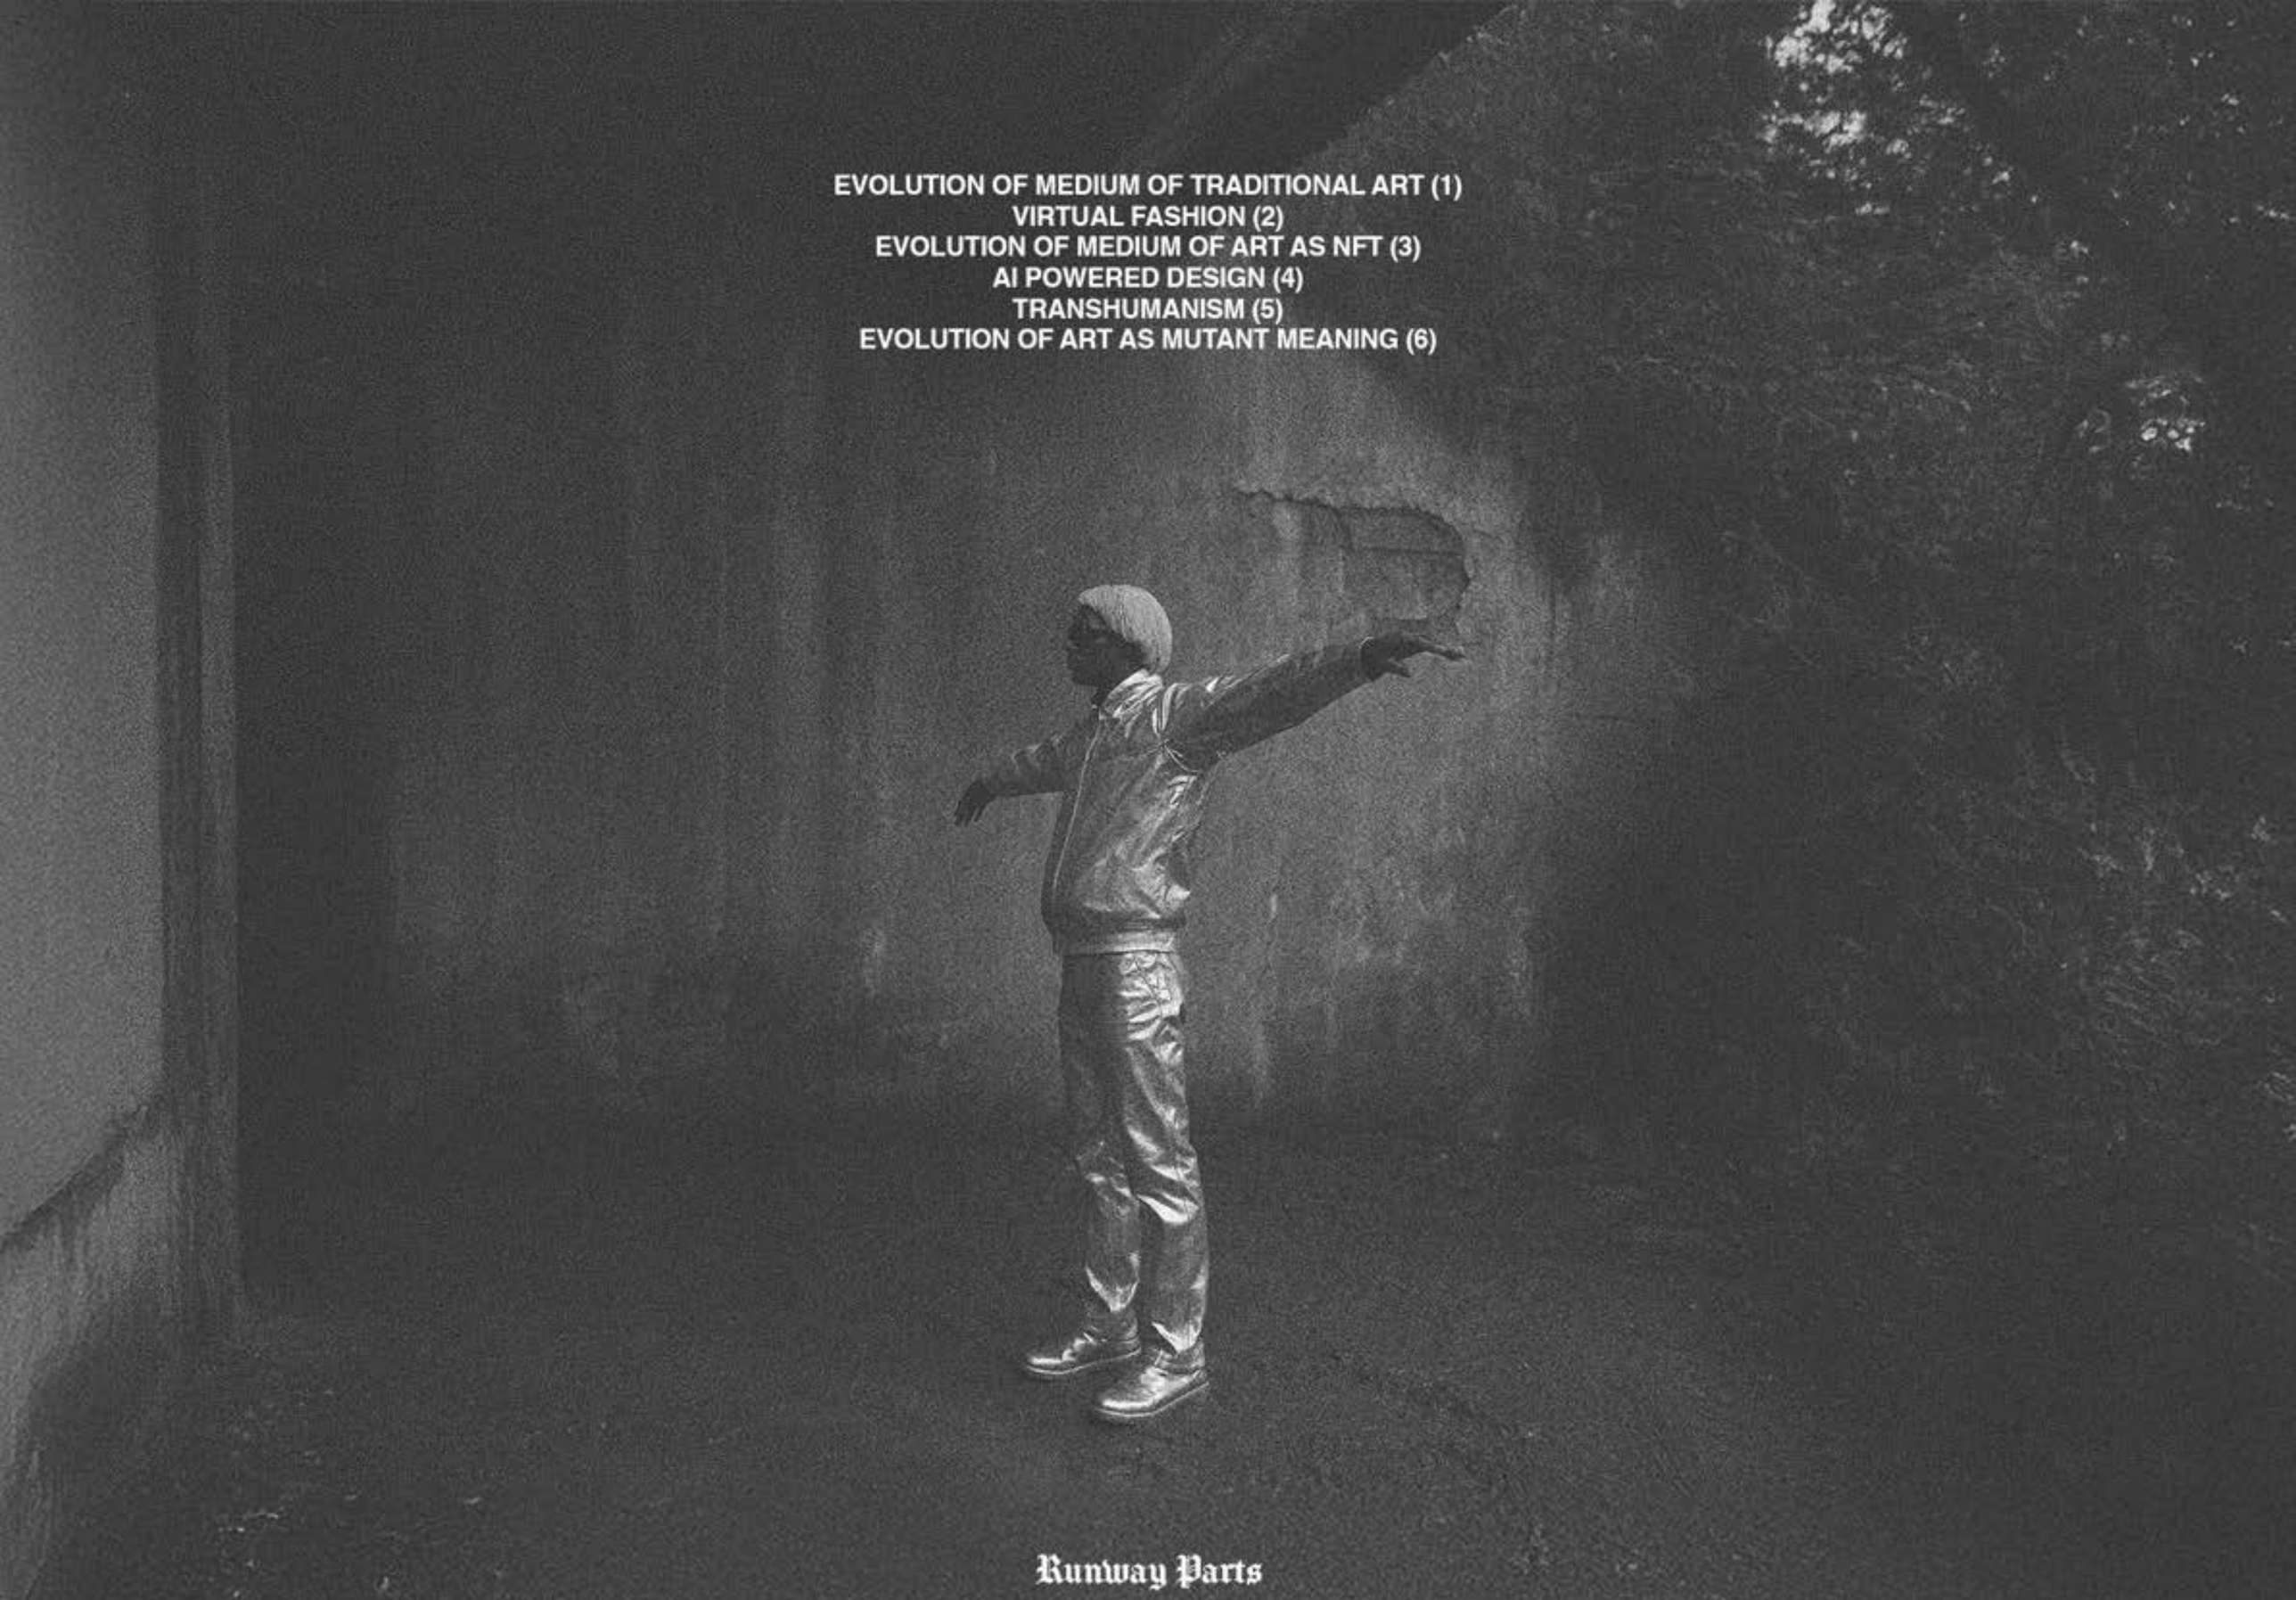

World Insights

Each chapter builds on the last: starting with AI-reimagined art classics, shifting to experimental digital fashion, blending NFTs and figures, resetting with pure AI generation, ascending minimally, and rebirth through transformed echoes.

World Insights

EVOLUTION OF MEDIUM OF TRADITIONAL ART (1)
VIRTUAL FASHION (2)
EVOLUTION OF MEDIUM OF ART AS NFT (3)
AI POWERED DESIGN (4)
TRANSHUMANISM (5)
EVOLUTION OF ART AS MUTANT MEANING (6)

Runway Parts

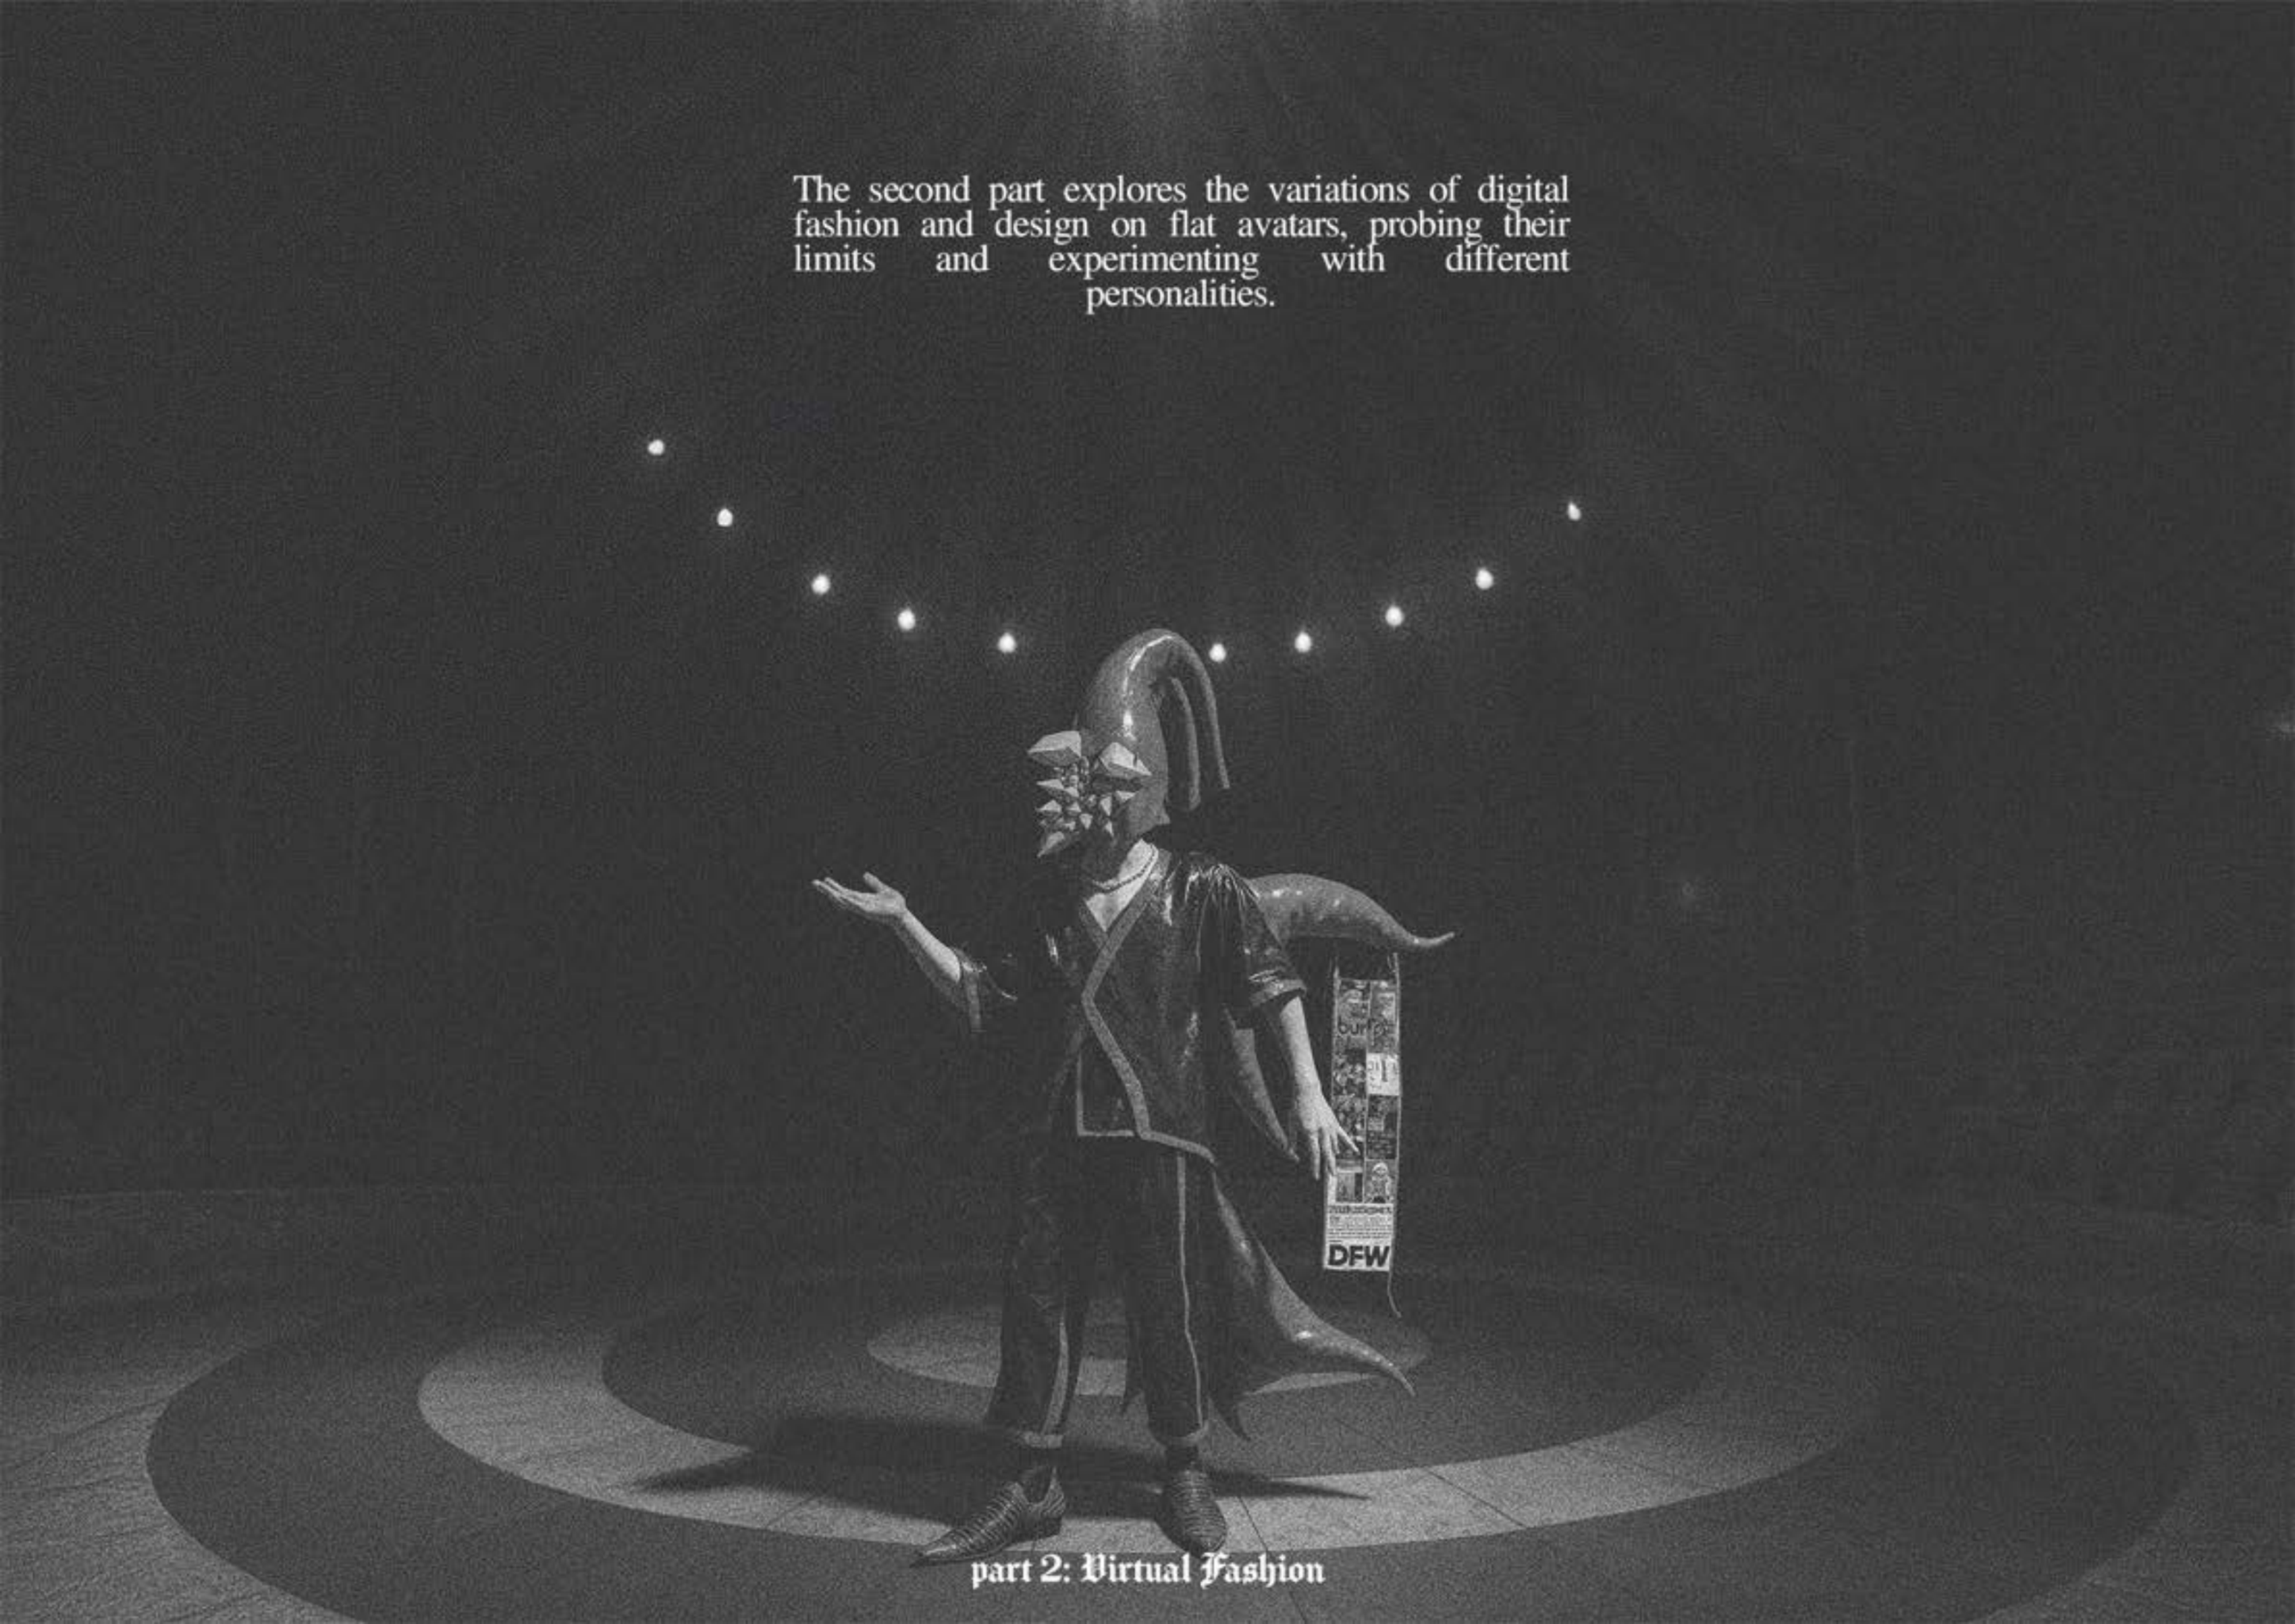

The runway begins with the avatarization of paintings (as one of the most traditional mediums) by post war figurative masters, whose designs aims to recapture the essence through this new dimension.

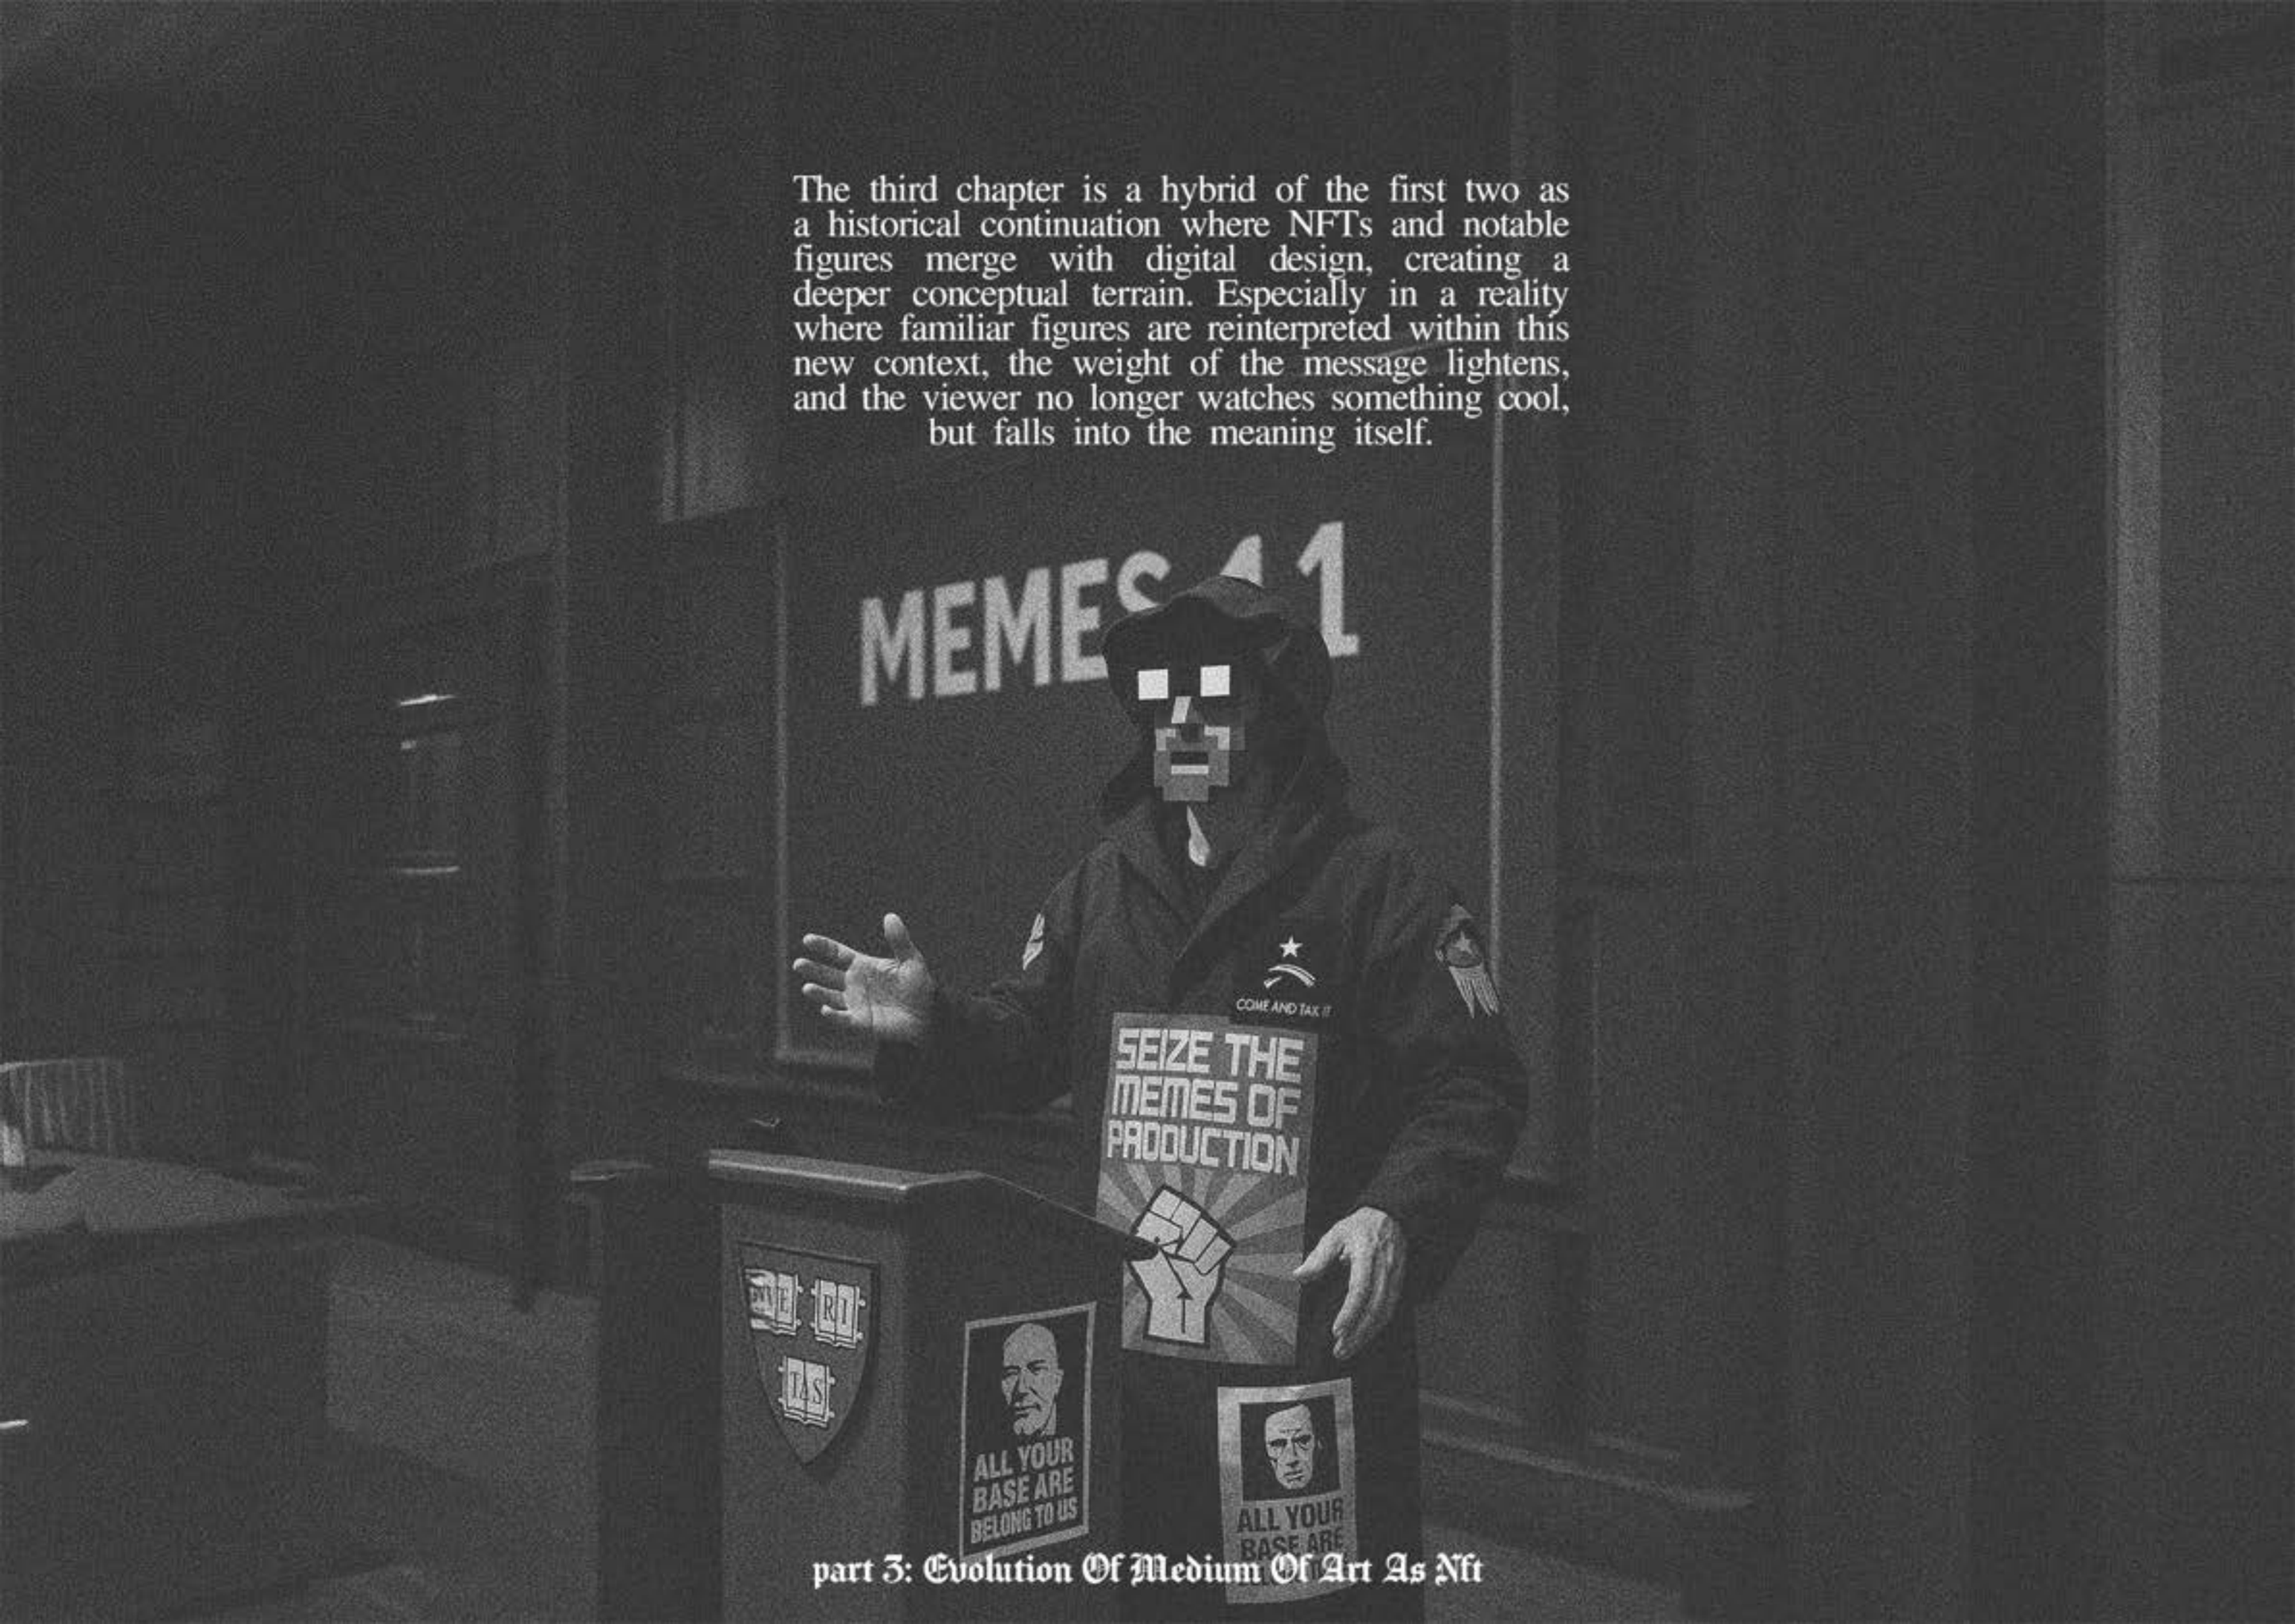

part 1: Evolution Of Medium Of Traditional Art

The second part explores the variations of digital fashion and design on flat avatars, probing their limits and experimenting with different personalities.

part 2: Virtual Fashion

The third chapter is a hybrid of the first two as a historical continuation where NFTs and notable figures merge with digital design, creating a deeper conceptual terrain. Especially in a reality where familiar figures are reinterpreted within this new context, the weight of the message lightens, and the viewer no longer watches something cool, but falls into the meaning itself.

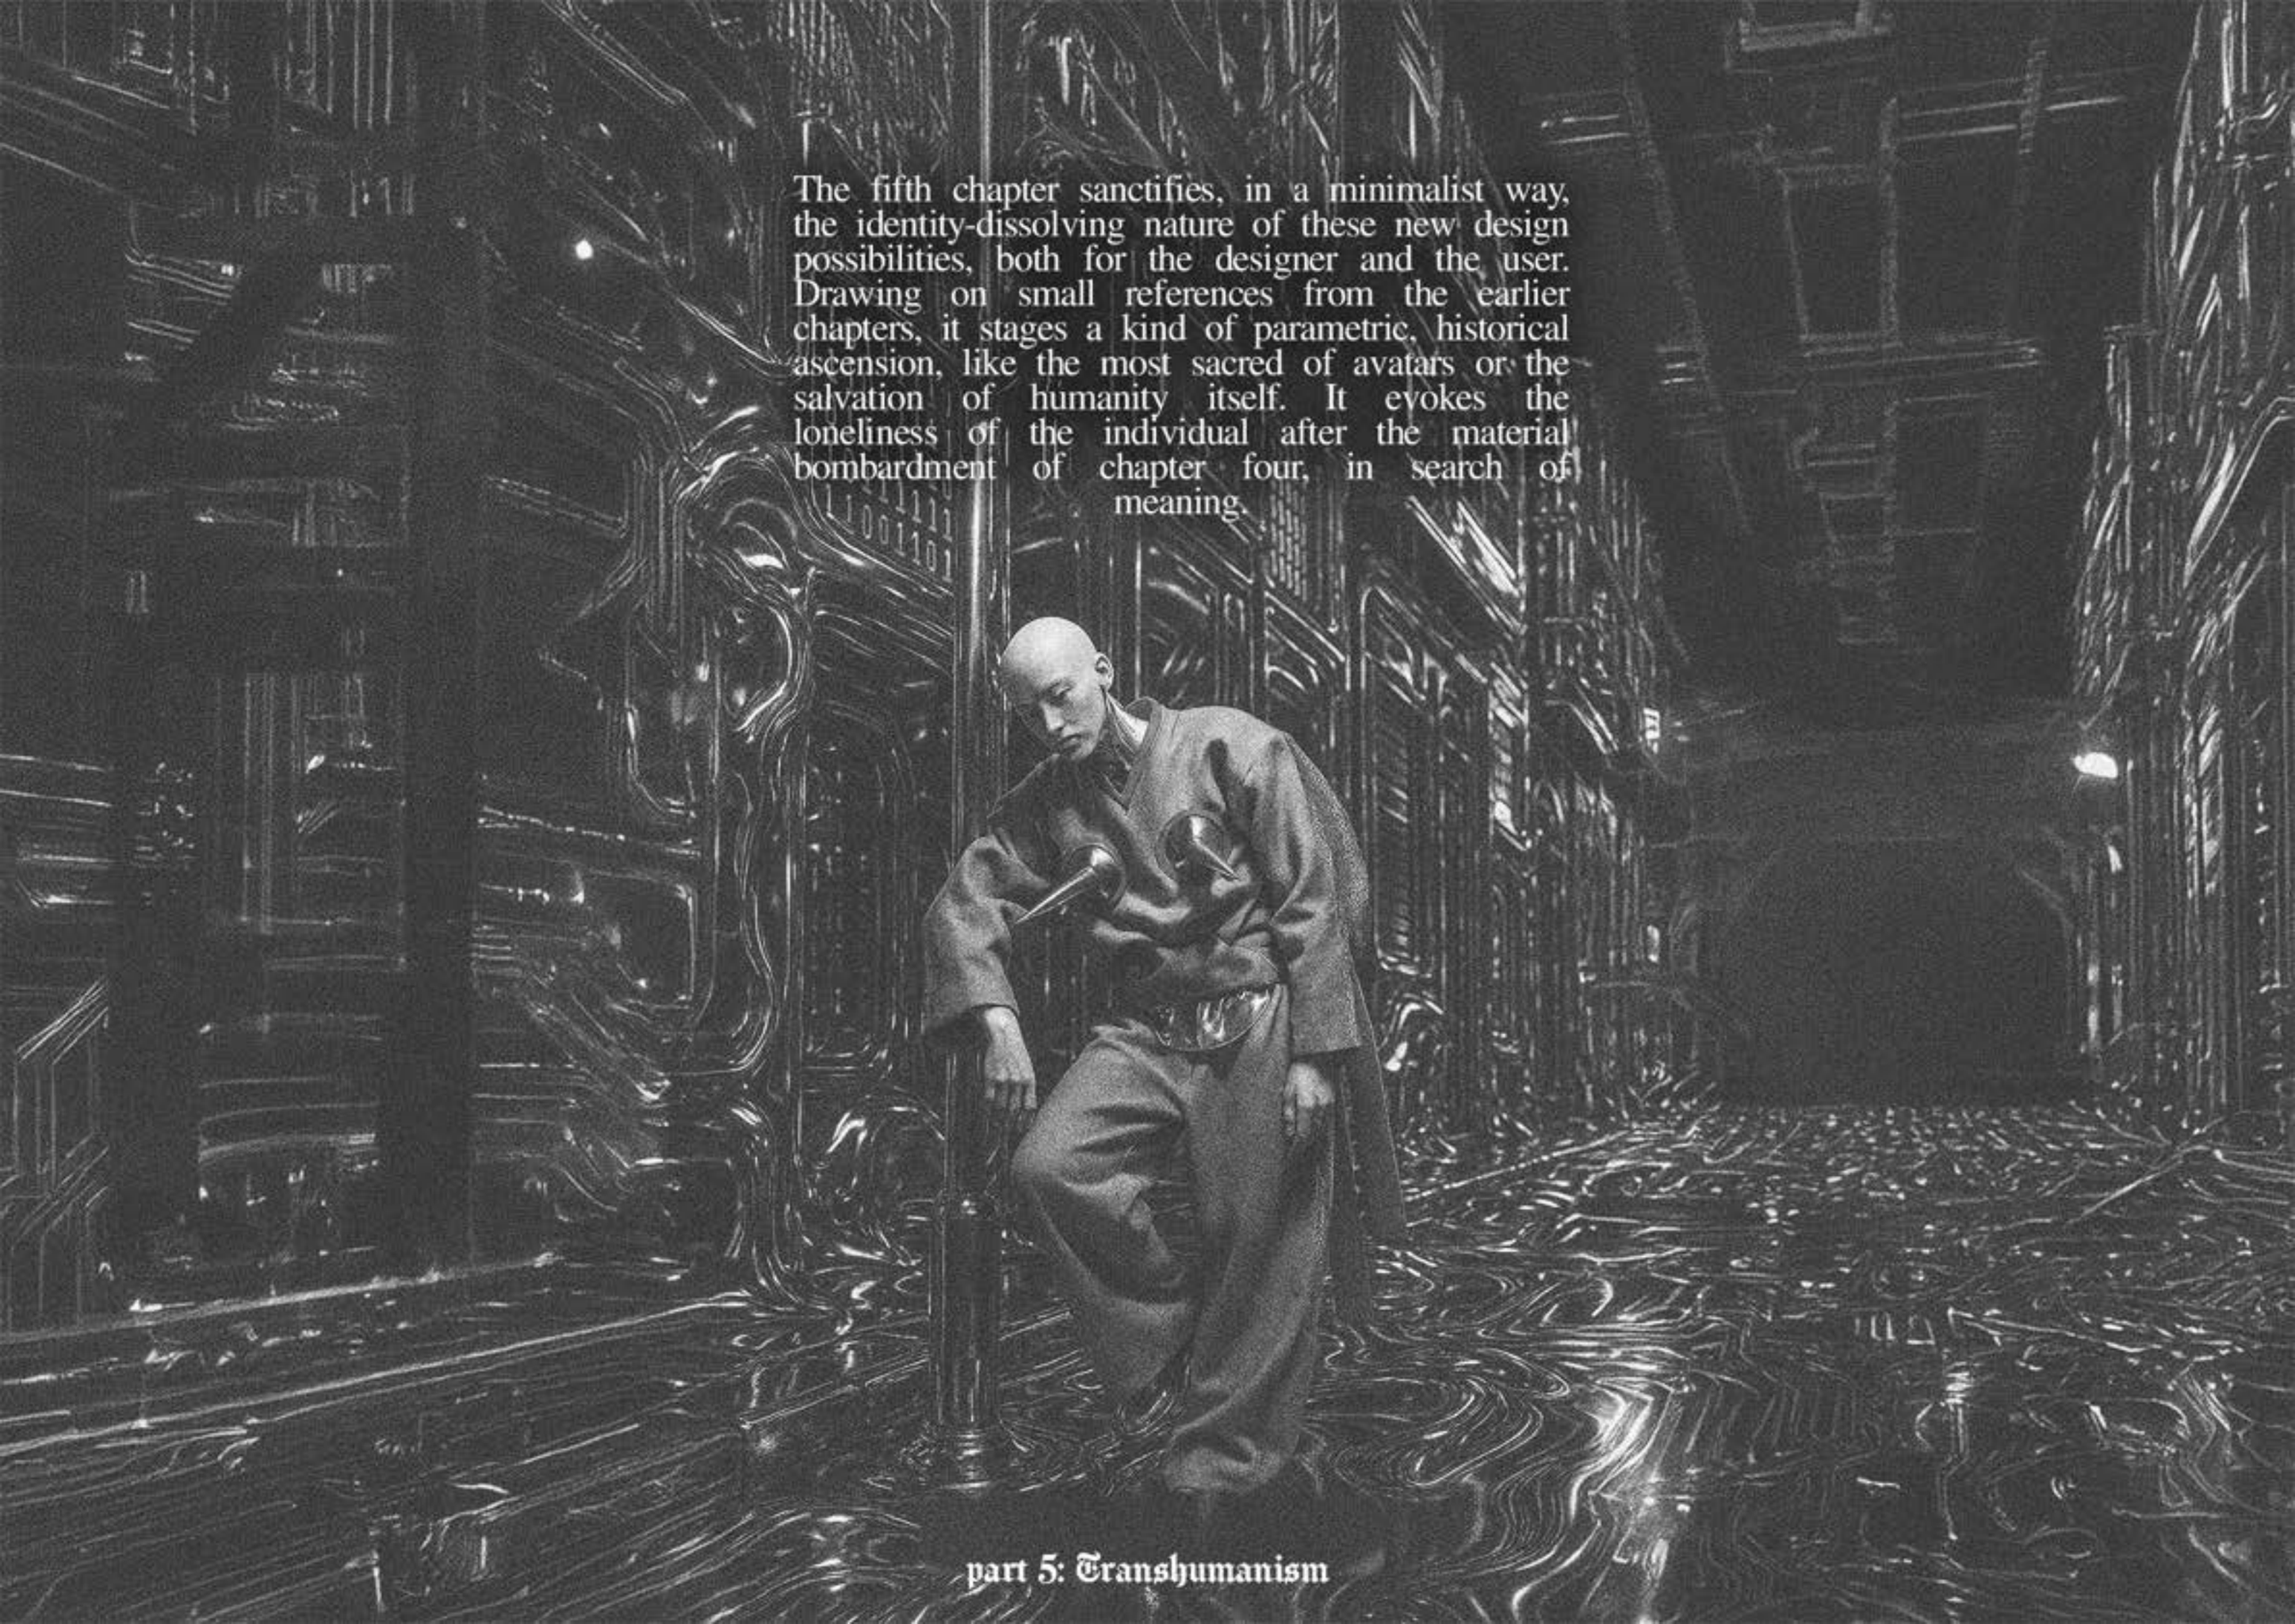

part 3: Evolution Of Medium Of Art As Nft

In the fourth chapter, much like what the internet and AI did to us initially, the prior three parts are effectively reset. Through avatars generated entirely by AI, the runway erases and devalues everything we saw before. This mirrors the cheapening of cool visuals under the flood of AI-produced imagery, where hand-made labor loses its aura.

part 4: Ai Powered Design

The fifth chapter sanctifies, in a minimalist way, the identity-dissolving nature of these new design possibilities, both for the designer and the user. Drawing on small references from the earlier chapters, it stages a kind of parametric, historical ascension, like the most sacred of avatars or the salvation of humanity itself. It evokes the loneliness of the individual after the material bombardment of chapter four, in search of meaning.

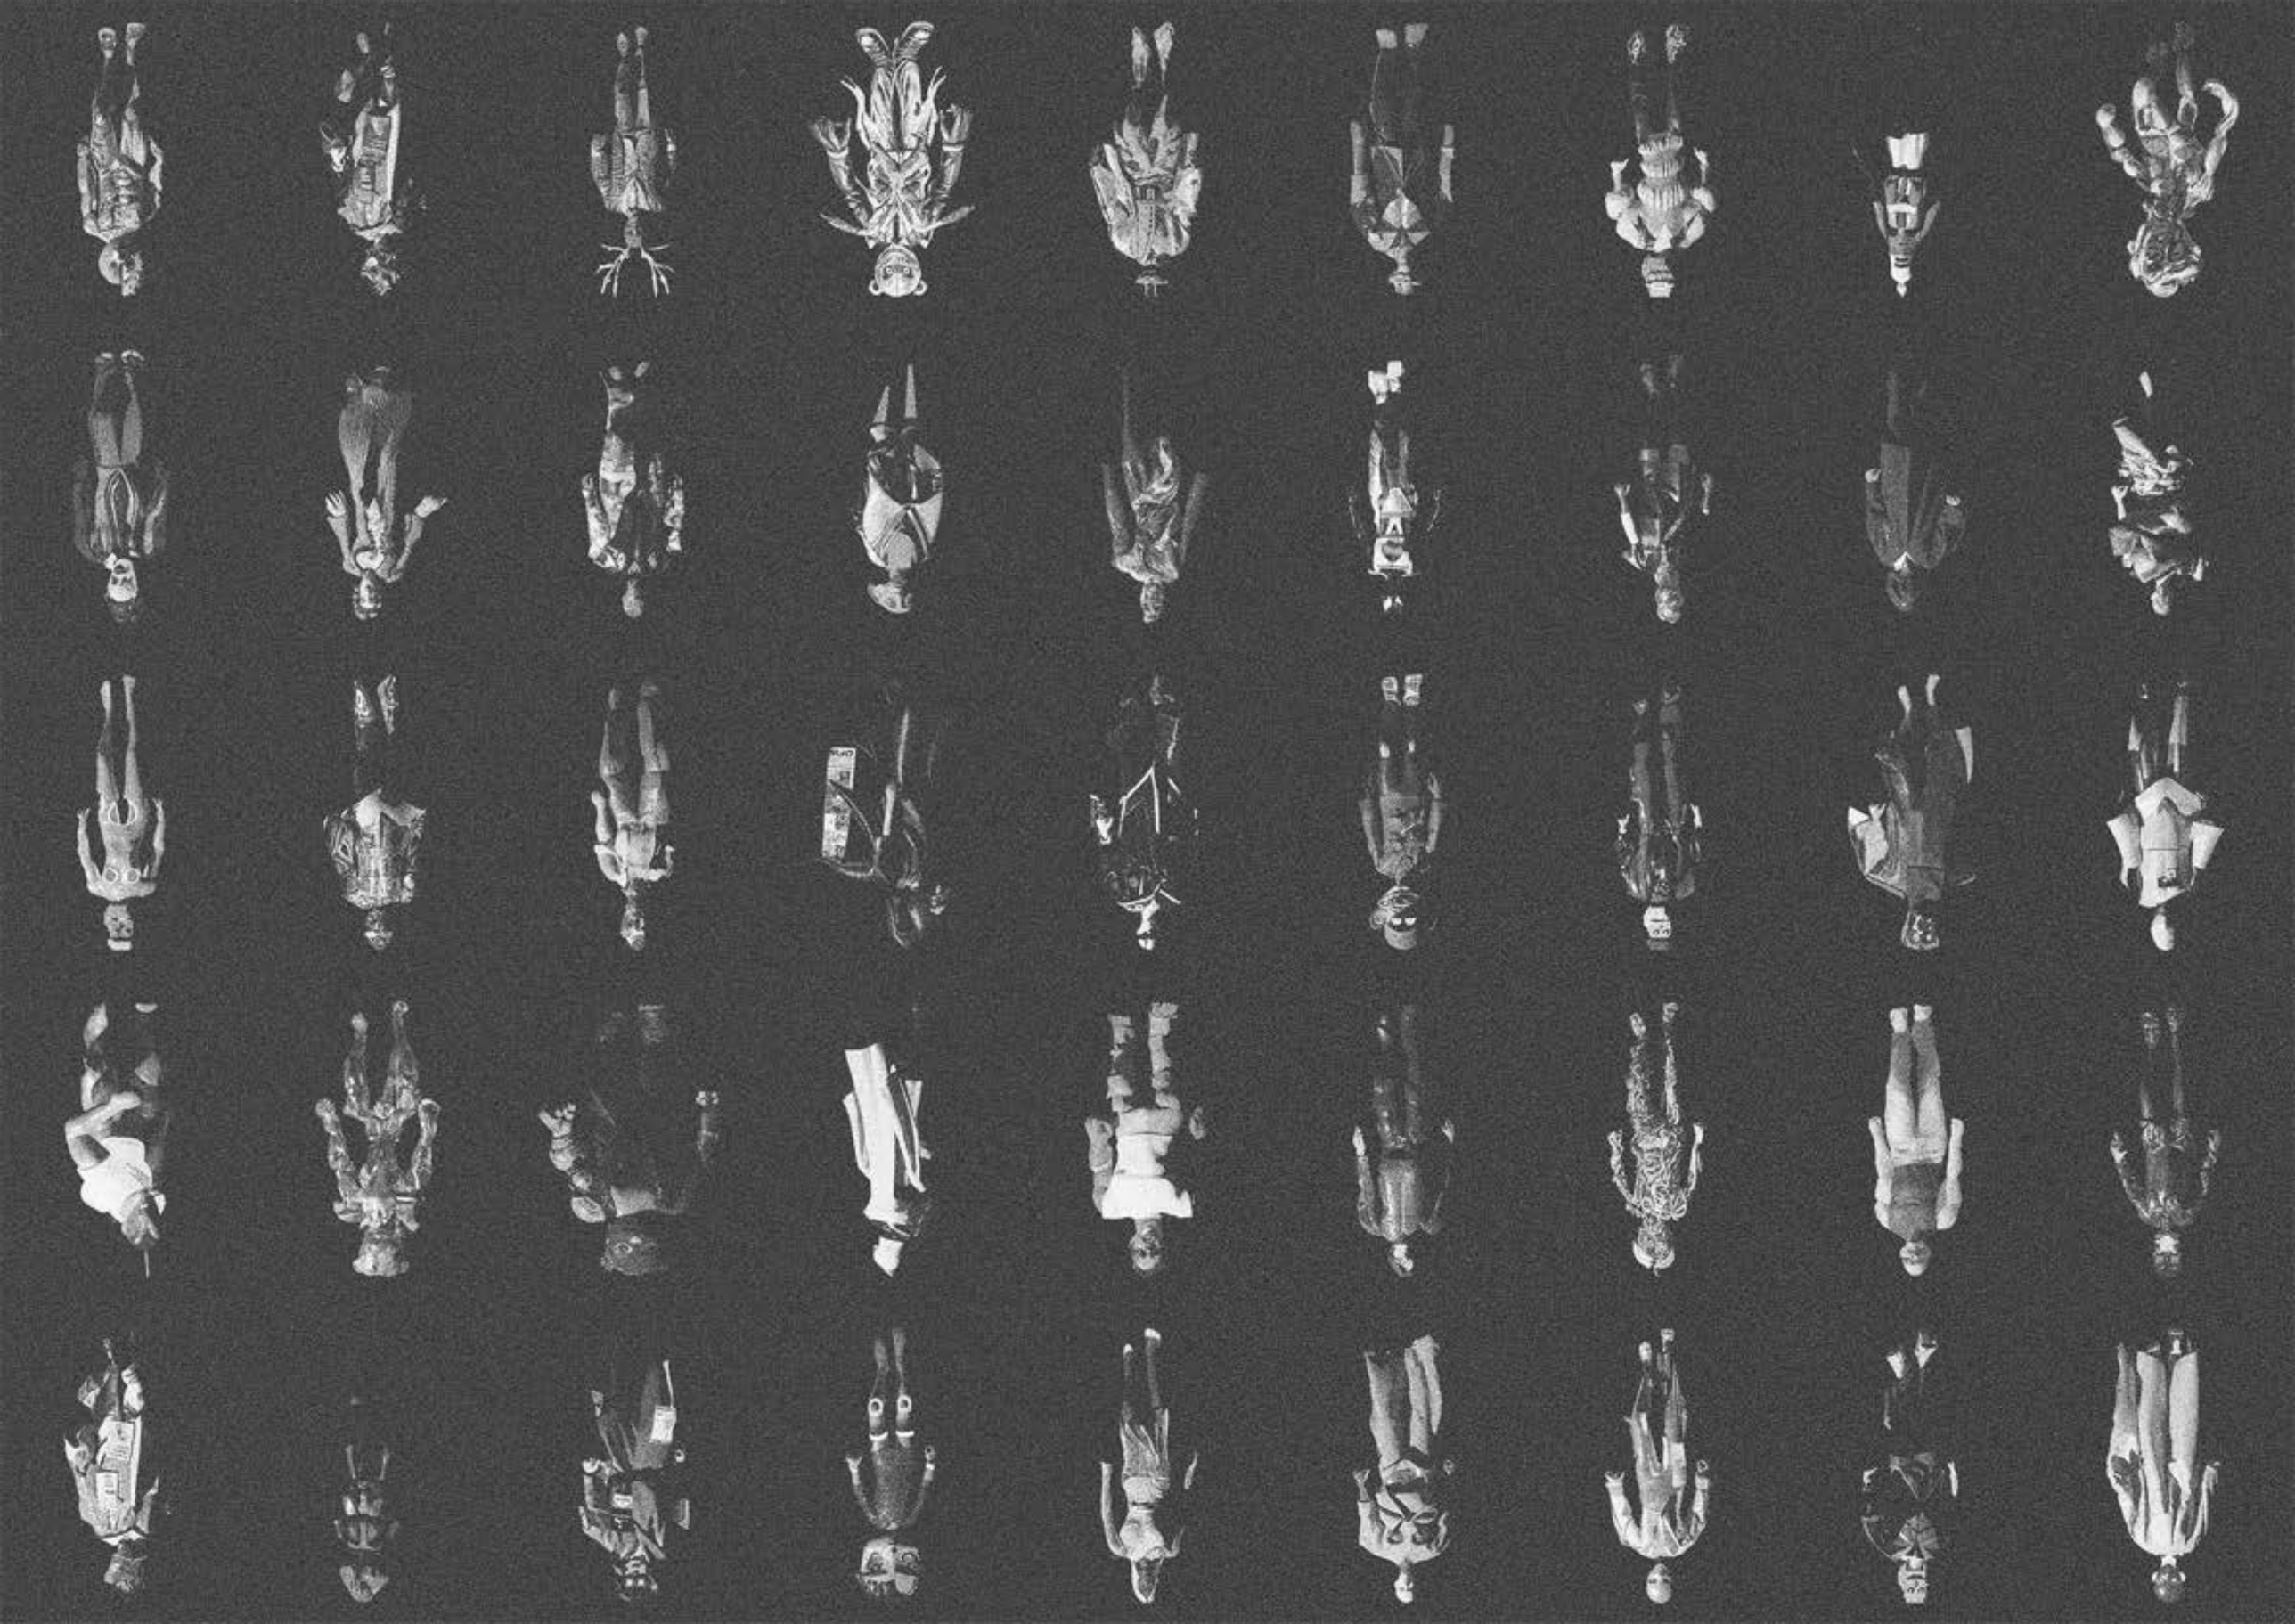

part 5: Transhumanism

The final chapter shows no new avatar. Like a phoenix rising from its ashes, the runway closes with the rebirth of an idea, an institution, or perhaps anything at all. Strategically selected avatars from the previous five parts return, but altered: recognizable yet transformed. Unlike the recycled revival of 90s denim or 2000s looks, this is a deeper return to essence: not nostalgia, but a fragmented transformation of a simulated century condensed into thirty minutes. *Here, the core theme is not the avatars or the clothes themselves, but the multidimensional narrative of AI, the metaverse, blockchain, belonging, and identity.*

Avatars

Component	Method & Impact
Textile Physics Fidelity	Utilizes DRACO and Meshopt The 48 garments were designed and simulated using Clo3D. C2W2 is the first time ultra-realistic, dynamic textile physics from Clo3D has been successfully streamed and rendered as a complete 3D exhibit within a standard web browser environment.
3D Asset Optimization	All 3D models (GLB/VRM) are heavily optimized using DRACO Compression and Meshopt. This ensures that despite the detail, individual file sizes range from 0.5MB – 20MB (averaging 5MB), facilitating a seamless real-time stream.
Rendering Efficiency	The entire scene is fine-tuned for minimal resource strain, running consistently with just 1 to 3 Draw Calls (max 3). This is key for stable exhibition across low-power and high-demand VR hardware.
Visual Aesthetic Control	Custom WebGL / Three.js rendering provides total control over visual fidelity, enabling the dark, dramatic lighting, custom shader effects, and high-quality material rendering unique to the C2W2 aesthetic.
Cross Platform Compatibility	Integration with WebXR delivers a native Virtual Reality experience when viewed on a compatible headset, transforming the work from a fixed video into a habitable world without specialized applications.

C2W2 demands speed. By executing a complex rebuilt from Hyperfy v1 into pure Three.js and WebGL, the new logic achieve unprecedented visual fidelity and accessibility. This approach concretes delivering the artistic vision with pure code.

The core of the C2W2 avatar collection lies in its uncompromising pursuit of hyper-realism in digital material. The garments are the result of advanced, dynamic textile simulations:

%80 of the fashion pieces featured in the runway were designed, patterned, and simulated using Clo3D, an industry-leading software for true-to-life cloth physics. *This simulation captures the authentic weight, drape, and movement of the fabric.*

Through optimization and Three.js rendering, C2W2 exhibits these complex, high-fidelity textile simulations within the simple environment of a web browser. This integration marks a crucial technical achievement, ensuring that the garments move and react realistically regardless of the viewing platform.

The collection explores a dichotomy between familiar and alien materials: ultra-realistic denim and cotton coexist with high-gloss chrome, random memes, fluid metal, transparent glass, mouse painted captions, and the concept of "invisibility." This layered materiality emphasizes the transformation of identity in the digital domain.

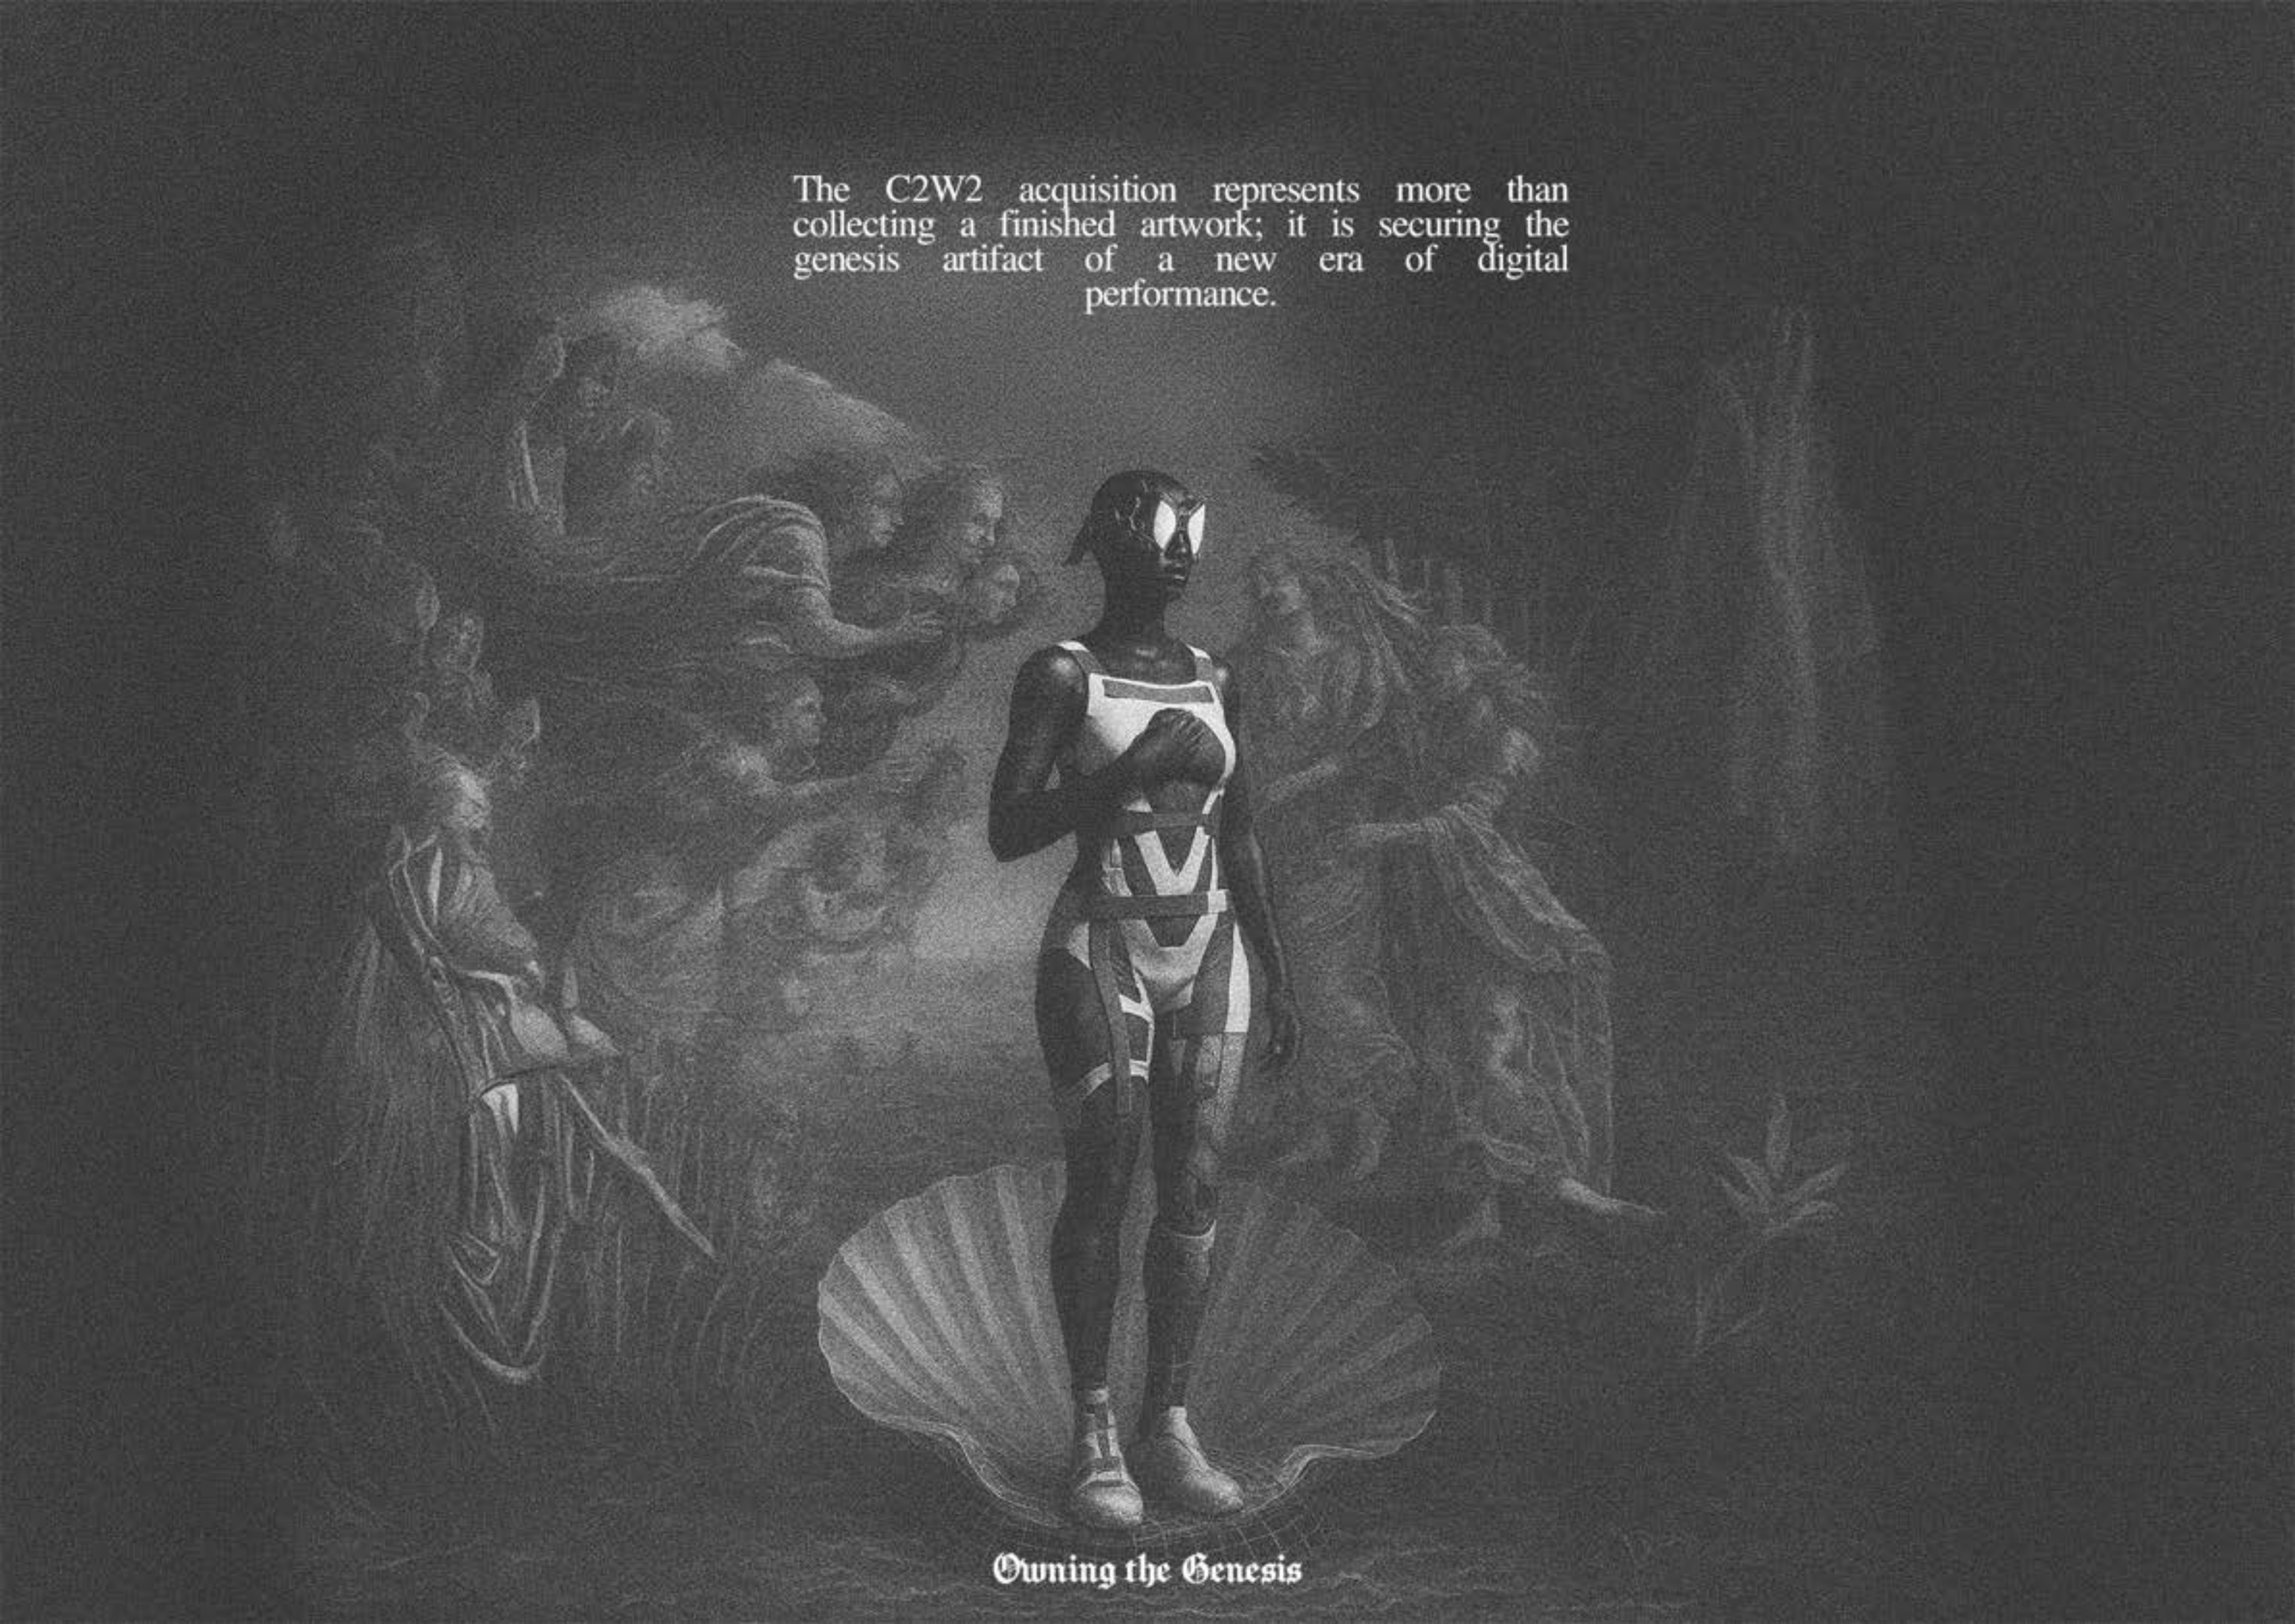

The way a material responds to light and movement is critical to its perceived existence. In C2W2, the simulated fabric is as vital to the agent's identity as their animated walk.

Digital Materiality Simulation

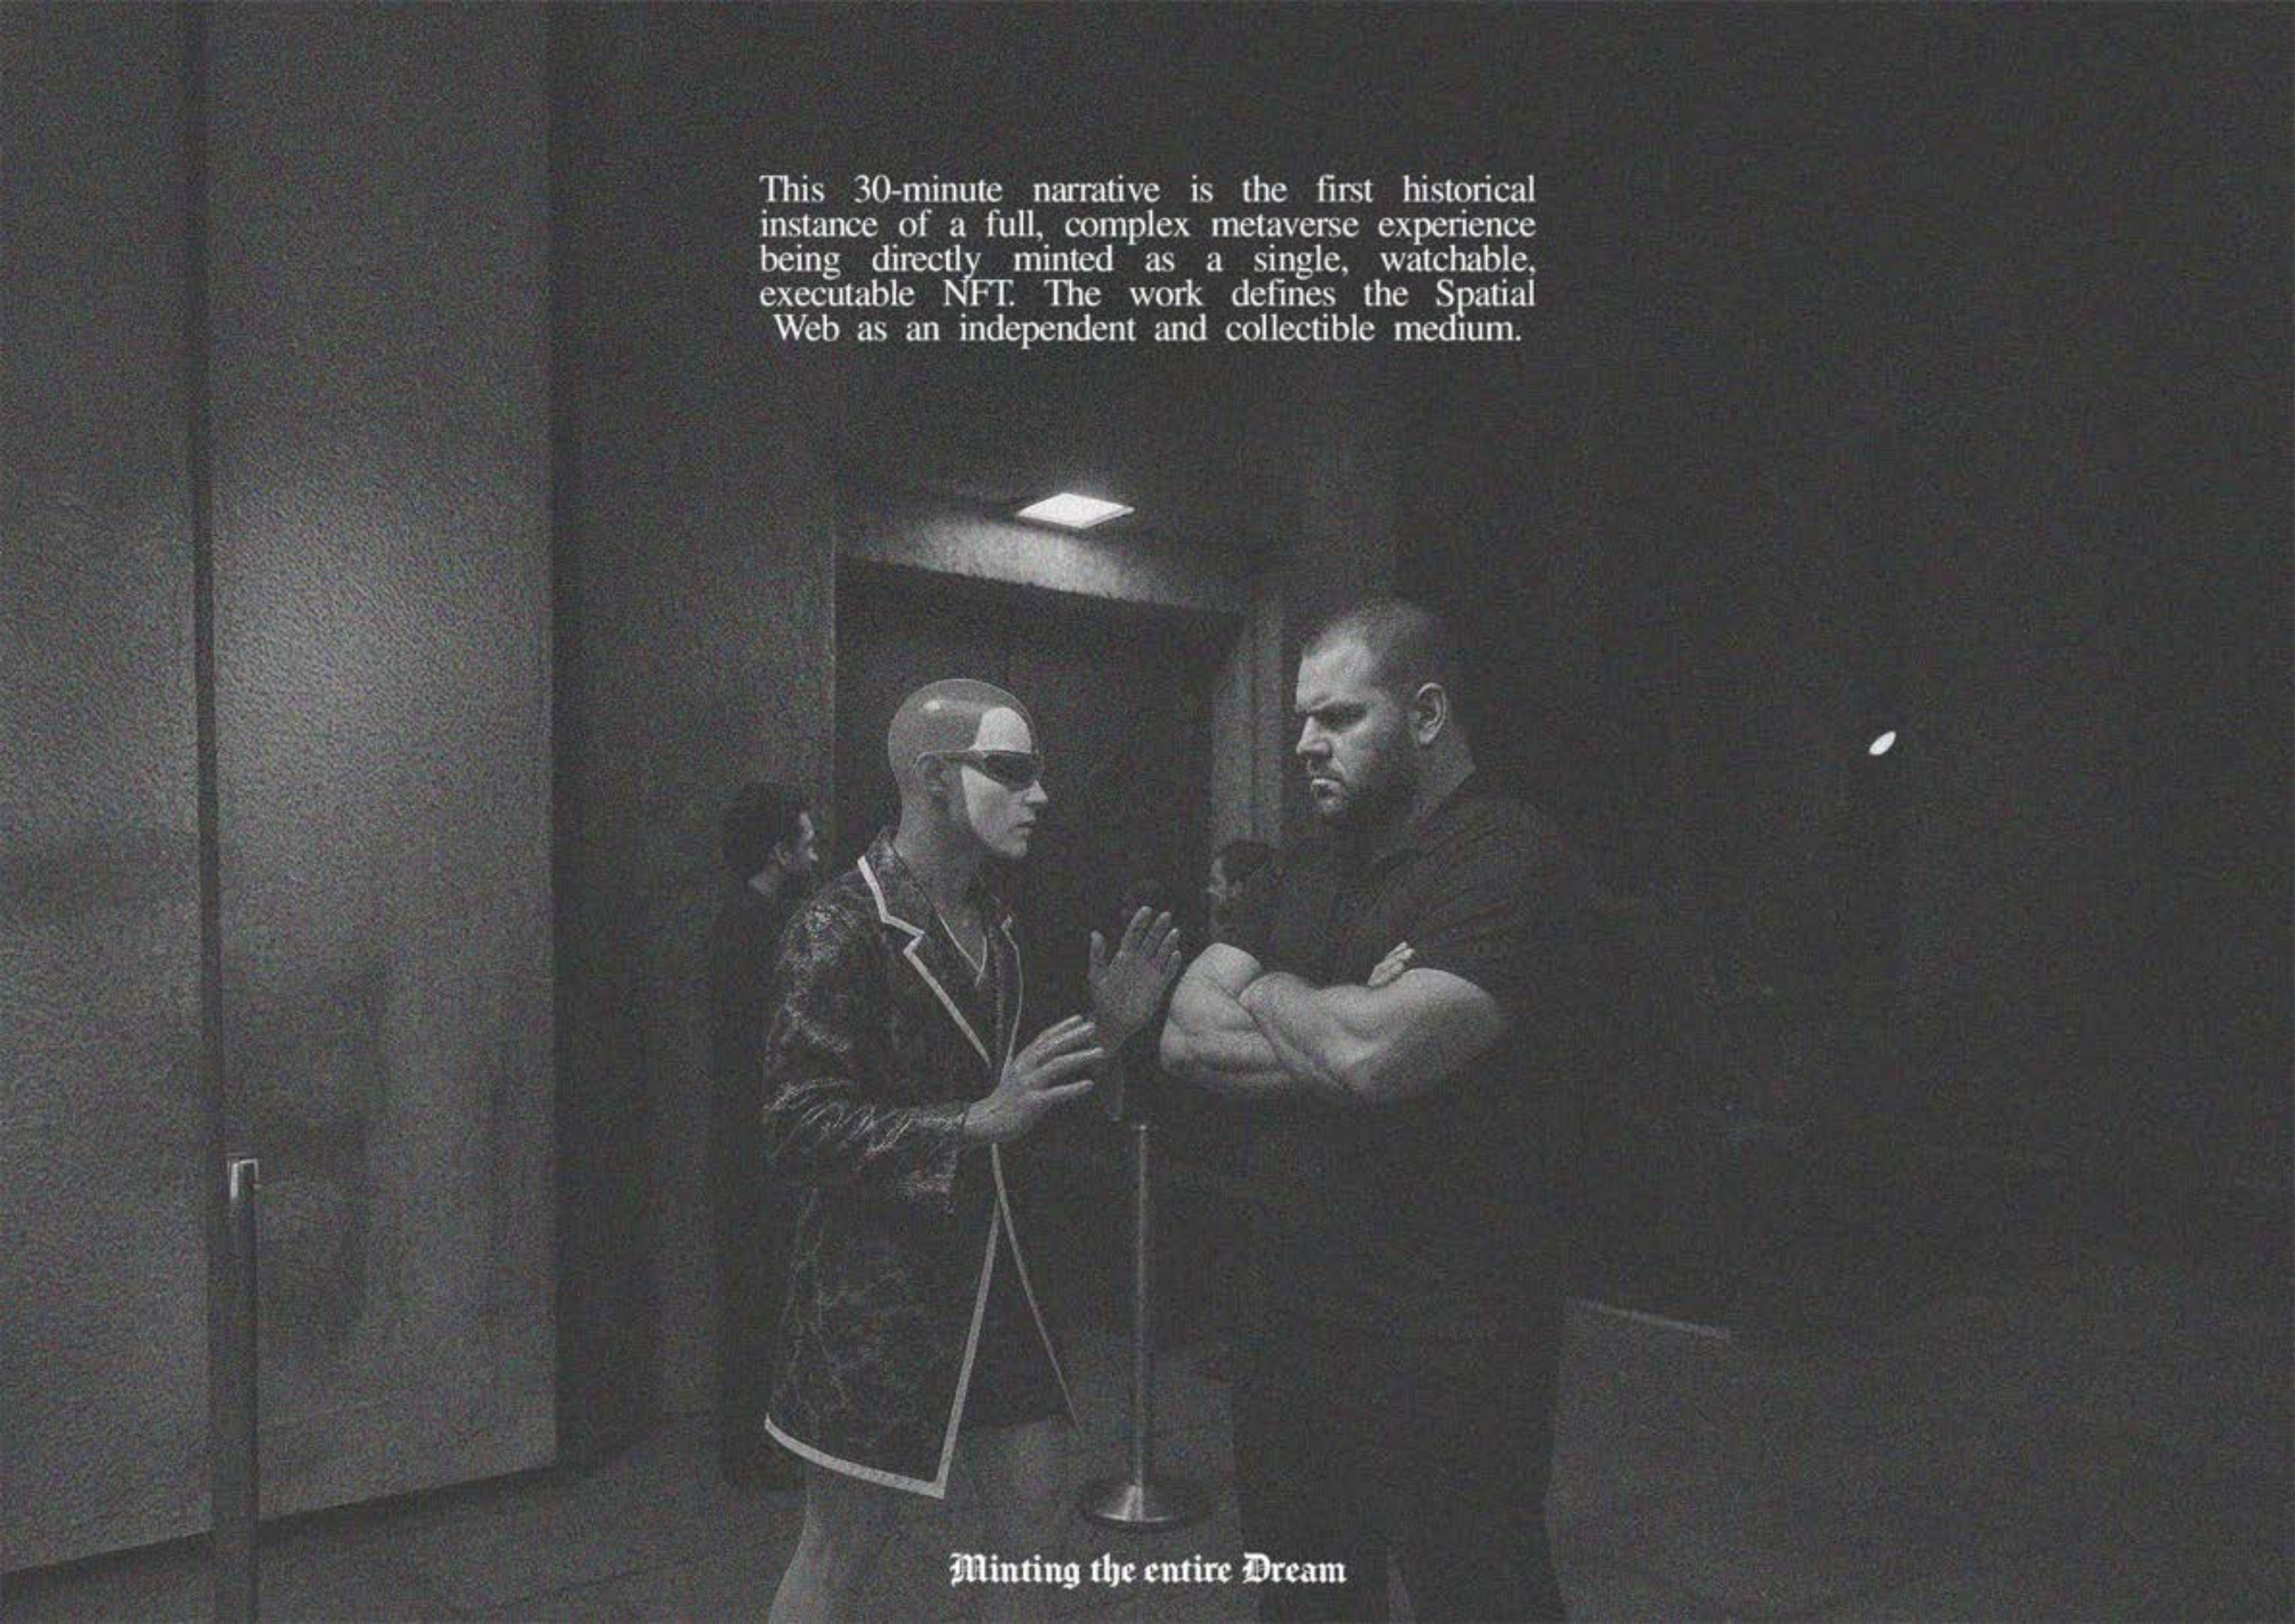

The C2W2 acquisition represents more than collecting a finished artwork; it is securing the genesis artifact of a new era of digital performance.

Owning the Genesis

This 30-minute narrative is the first historical instance of a full, complex metaverse experience being directly minted as a single, watchable, executable NFT. The work defines the Spatial Web as an independent and collectible medium.

Minting the entire Dream

This approach eliminates platform dependency, ensuring the artwork is instantly viewable from any browser, including directly within OpenSea, thereby guaranteeing its accessibility and functionality for perpetuity.

To ensure the artwork's survival beyond any single platform, the entire project ecosystem is secured on the permanent archival layer of Arweave, accessible via the Ethereum blockchain.

Perpetuity and Provenance

The core HTML file, the complete set of PFADI assets (models, environment models), and all audio/text files are secured on Arweave (via Ethereum transactions).

This robust archival solution ensures that the artwork is permanently preserved and censorship-resistant. Even if external hosting services fail, the work's components remain verifiable by any individual or institution globally.

Perpetuity and Provenance

To guarantee the collector granular provenance and ownership over the artistic process, C2W2 establishes a dual-collection structure.

PFADI is the secondary collection where all foundational assets are cataloged and minted separately.

PFADI includes every sound file and every optimized 3D model used in the show, providing the collector or archivist with irrefutable proof of ownership of all original building blocks.

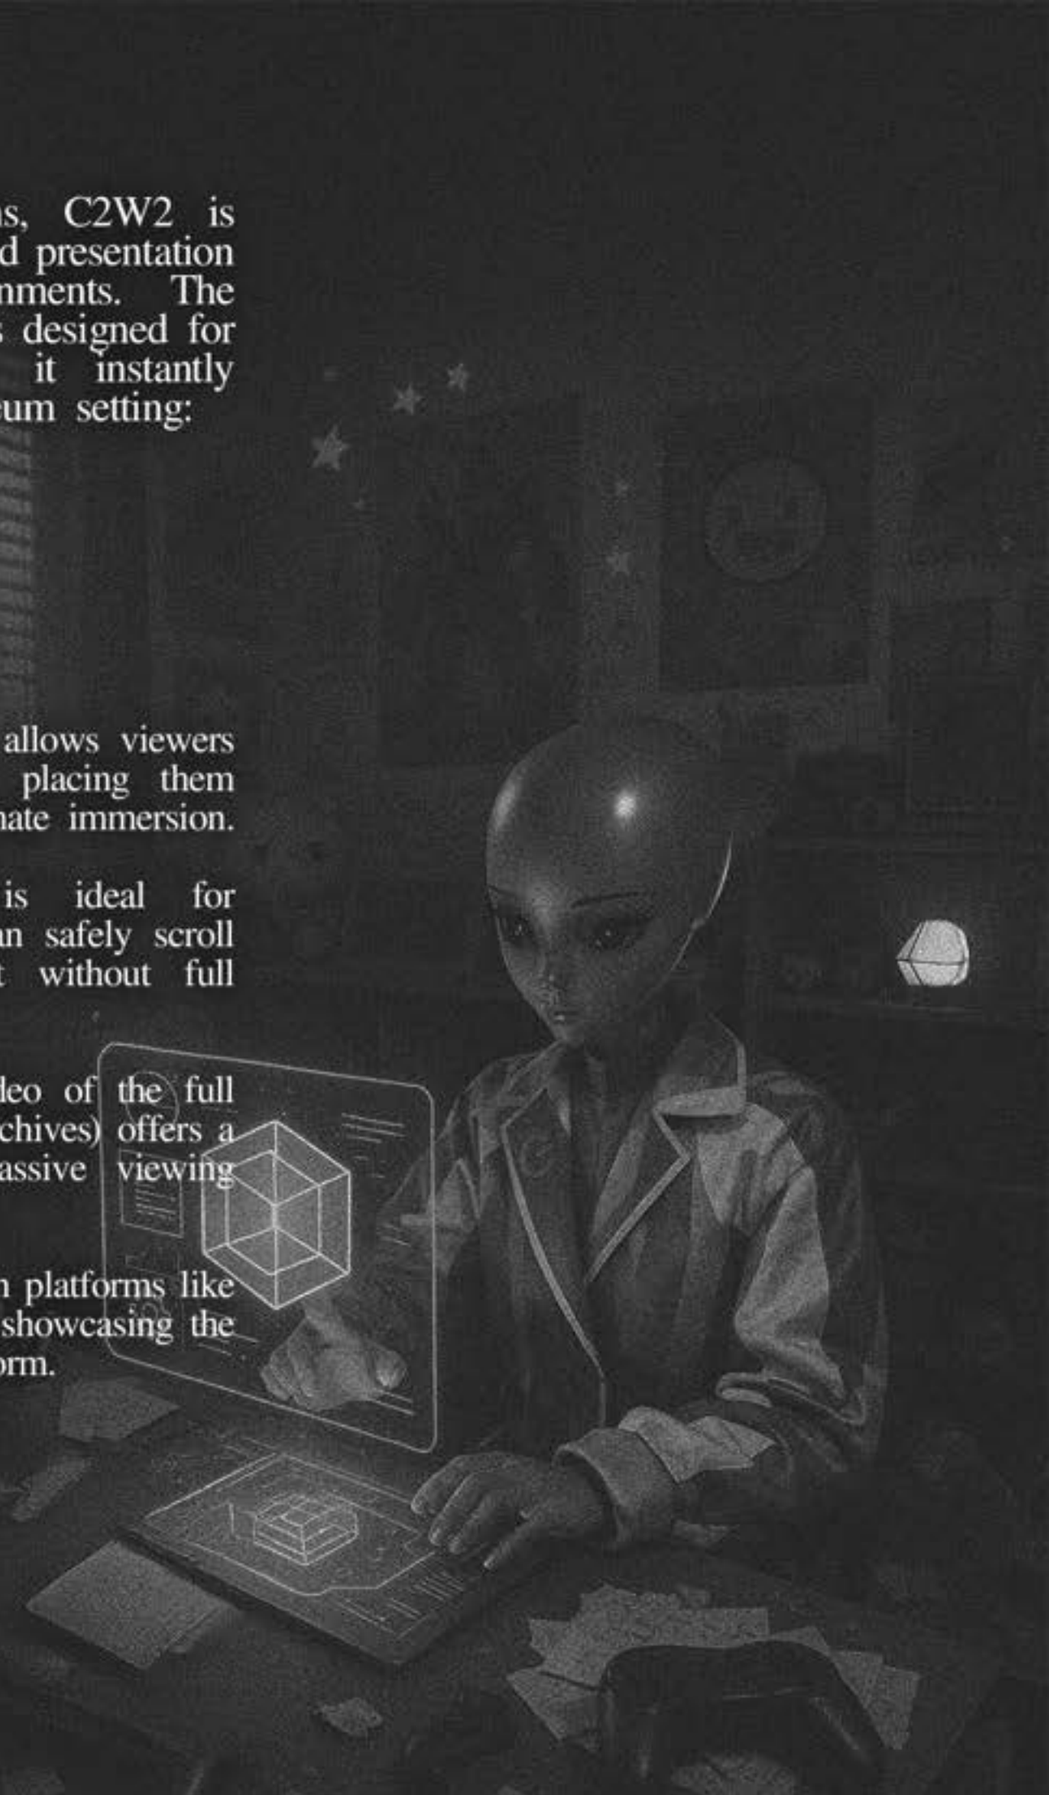

Post Flesh Architecture Dream Index

Upon acquisition, the collector secures perpetual rights and the full, verifiable archive of the complete 30-minute narrative performance and the entire PFADI asset index, guaranteeing the work's lasting cultural and market value.

Unlike complex digital installations, C2W2 is engineered for seamless, low-overhead presentation across diverse exhibition environments. The underlying on-chain code structure is designed for "plug & play" integrity, making it instantly adaptable for any gallery or museum setting:

Required Setup	Exhibition Mode	Description
VR Headset	**Immersive VR**	The full, navigable WebXR experience allows viewers to walk freely alongside the agents, placing them directly inside the Digital Void for ultimate immersion.
Touchscreen Monitor Tablet (via iframe)	**Interactive Display**	The fixed-camera iframe version is ideal for non-intrusive gallery kiosks. Viewers can safely scroll and interact with the linked content without full navigation capabilities.
High-Resolution Monitor / Projector	**Cinematic Loop**	A pre-recorded, multi-camera edited video of the full 30-minute experience (available in the archives) offers a polished, cinematic presentation for passive viewing areas.
Any Web Browser	**On-Chain Access**	Viewable directly from the NFT token on platforms like OpenSea, validating the provenance and showcasing the work's primary, executable form.

Versatility for Any Venue

The C2W2 experience is set to a bespoke soundtrack, deeply integrated into the narrative flow of the six chapters. The music is not incidental; it is designed to underscore the themes of technological evolution, digital identity, and cultural appropriation.

All audio tracks and sound files are permanently archived within the PFADI collection, ensuring the creator's sound design choices are preserved and verifiable forever.

Soundtracks

C2W2 is an organic transmission of the human-digital metamorphosis, documenting the complex evolution of existence into the era of the Click.

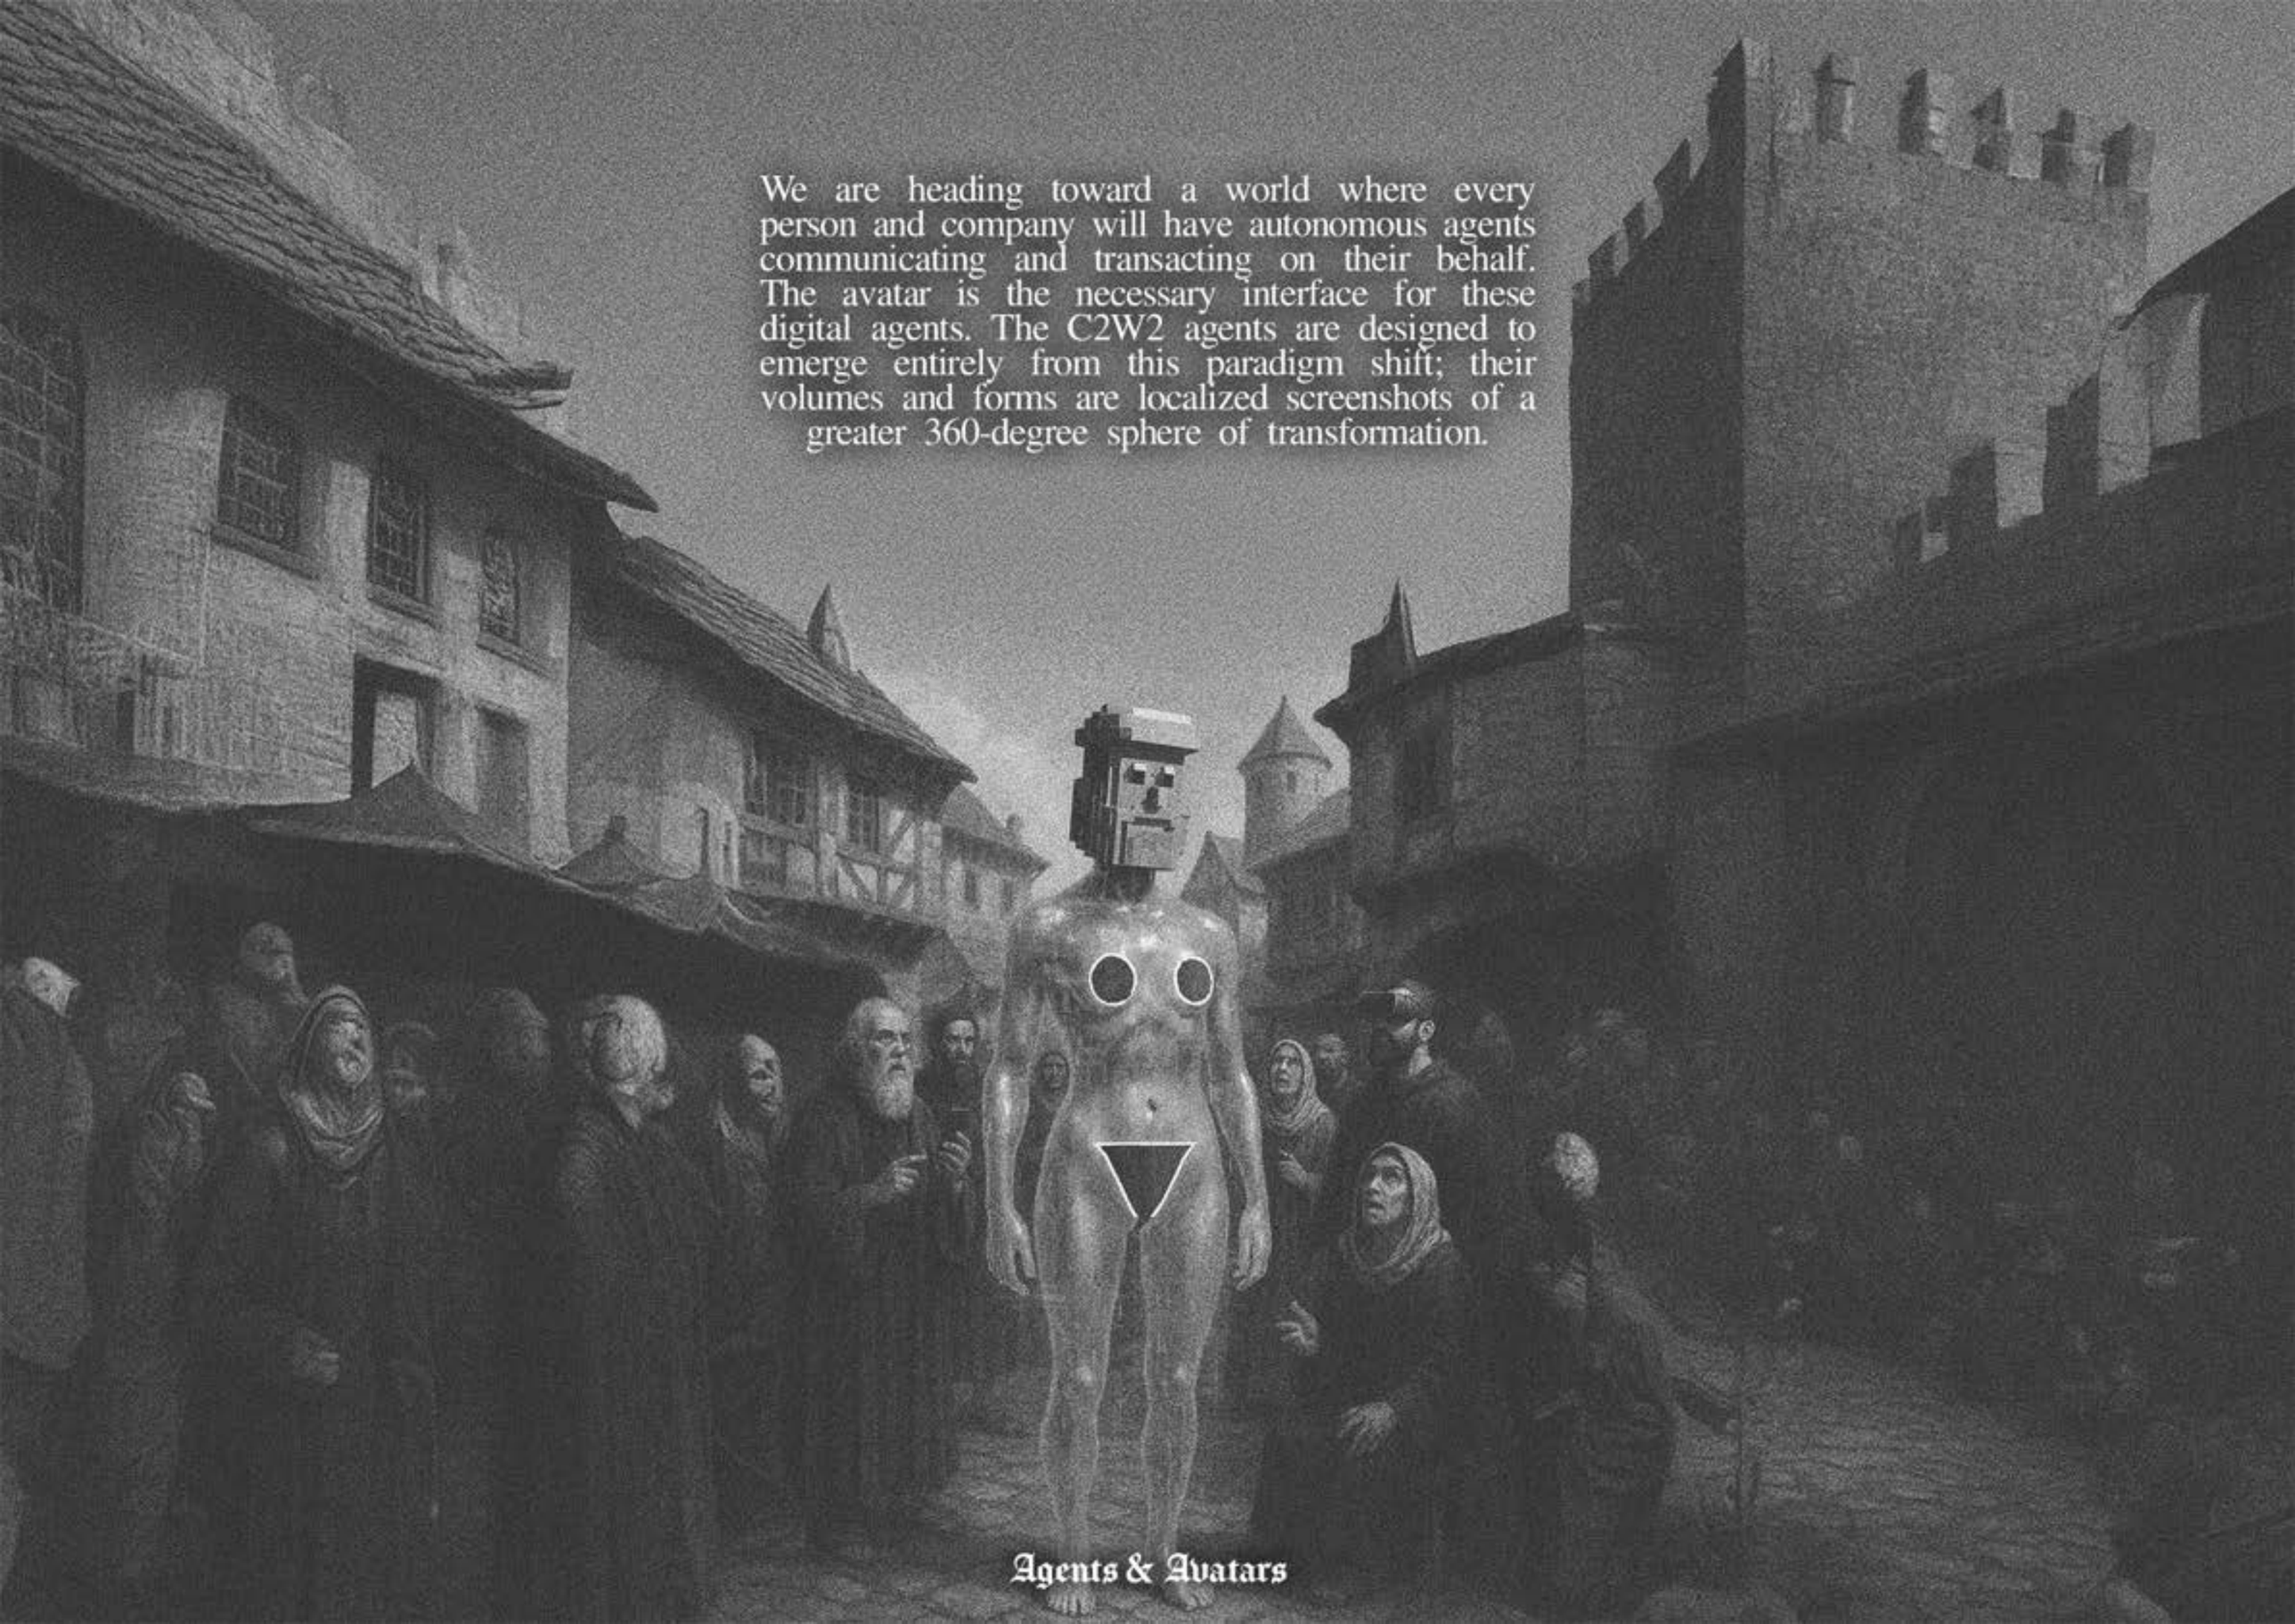

Creatoe's Note / Meditation

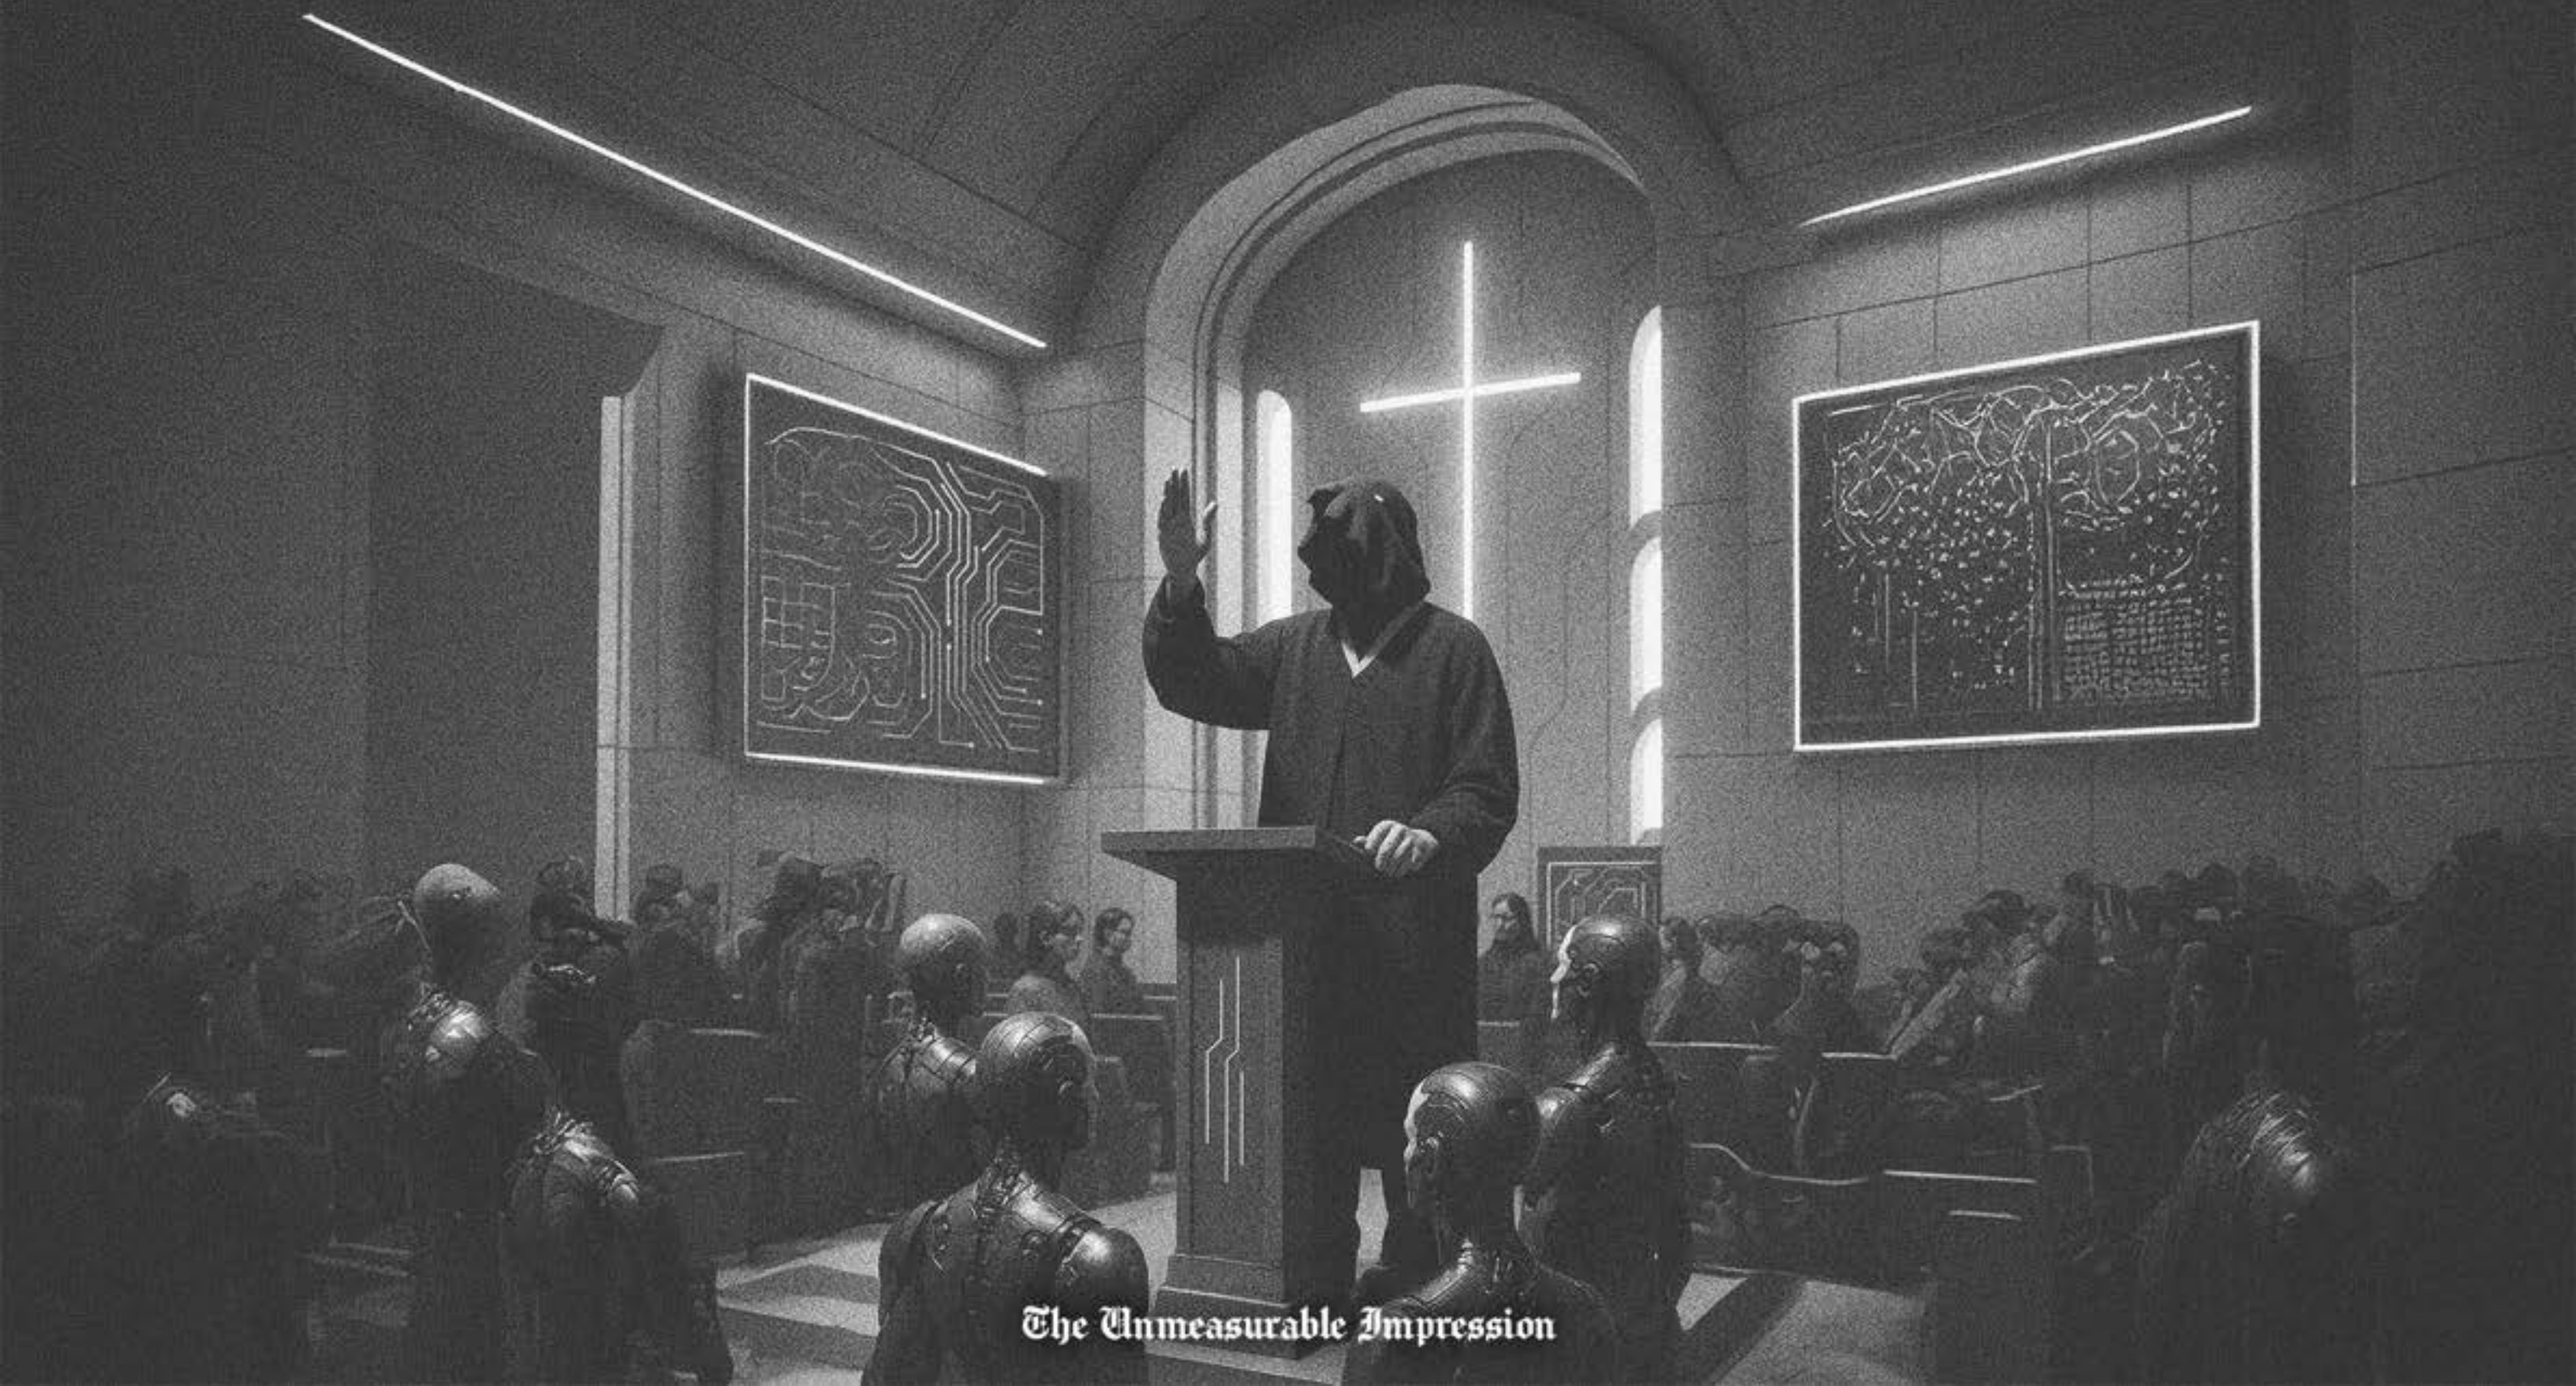

The runway structure itself serves as a cultural commentary. It is a three-dimensional reimagining of our daily habit of scrolling vertically through endless, thirty-second social clips (like TikTok or YouTube Shorts). This mathematics, which drives the algorithm's content feed, is strategically implemented beneath the runway, anticipating the future of online experience. 30 seconds, and next.

The TikTok Vertical Feed

We are heading toward a world where every person and company will have autonomous agents communicating and transacting on their behalf. The avatar is the necessary interface for these digital agents. The C2W2 agents are designed to emerge entirely from this paradigm shift; their volumes and forms are localized screenshots of a greater 360-degree sphere of transformation.
Agents & Avatars

Just as an AI that recommends meditation cannot meditate itself, the resonance left in the viewer at the end is visceral. The digital genesis yields an essential, human truth: The audience can only click, and watch.

The Unmeasurable Impression

Year	Project / Organization	Recognition / Award
2023	RedDAO	VCA x Draup Virtual Fashion Residency 1st Prize
2023	Metamundo	Top 50 Creators of the Metaverse
2022	Parcel x PangeaDAO	Creatorverse Buildathon Winner (Music Venue)

30-minute experience.

Runs fully in a web browser on-chain.
Single link includes Desktop / VR / Marketplace versions.
Freewalk version in Desktop / VR, Marketplace version with fixed cam views.

Features 48 garments, all in GLB format, VRM ready.

Originally built on Hyperfy v1.
Rebuilt using Three.js
Mintable as an HTML-based NFT
All files used in the show are stored on Arweave (PFADI),
with the NFT minted on Ethereum.

first time ever that a metaverse experience itself has been directly minted and can be watched straight from OpenSea or any browser window.

first time ultra-realistic, dynamic textile physics from Clo3D has been successfully exhibited in a standard web browser environment.

C2W2 stands for runway and avatars of click-to-wear, season 2

Quick Recap

Click to wear avatars. Oh my lord. Back in november 23, i remember how all came together under the armature of runway. Now it is different. 2025. This is more of a statement, a digital poetry, a nasty screenshot of who we are as civilization, or as the bubble we live in, located besides codes and algorithms, no faces, no mimics, only texts.

This isn't just a show. it's a monumental roar that'll echo through eternity. Not here to parade pixels or chase aesthetics. It is only the ghost facade. The form of the poem, as the letters there are beings here. We're here because something deeper is cooking—a towering hymn to human culture that refuses to be silent.

In here, we're just files. Numbers. Data points dancing. No bodies, no boundaries, no binaries. Pure human frequency encoded into forms that pulse with who we really are. Files don't have genders. Code doesn't have race. Math doesn't give a fuck about your flesh.

Each creation here is a being, an ideology smashing through the divide between organic and virtual, in a form of walking cool memes, forged by culture. Between fashion, gaming, and the infinite—whatever the fuck you call it. Everything here is a meme because everything real is a meme. Your culture, your identity, your precious physical form, they all code, all transformable, all eternally screaming into existence. It is open-sourcing thoughts and fantasies of my last two years into something bigger than myself. Tech allowed me to see and design my fantasies. Bacon fleshes in digital fleshes. He didn't like it tho. Because he has a premium distaste.

Fuck metaverse. That was half ass you. This is for the entities being born in networks right now, digital souls seeking avatars to dream in. Agents, born in net. For anyone who ever felt their truth was too complex for skin to hold. For a new breed rising, finding bodies, finding identities, standing tall beside us. Used to called bots, now fancier, and they're one of us.

Someday, we all will look back at this moment the way we stare at ancient temples. They might laugh at our ambitions or stand in awe. Doesn't matter. The raw, reckless spirit will echo either way, a cathedral of who we are, carved into the stars.

I'm just the messenger, childishly curating a palette of tools so high it teeters on the edge of madness. No answers, no feelings. I am you, this is you, your life, your medium, your monument. Let it shatter your bones, ignite your mind, and stand as a timeless lighthouse long after we're monochrome.

That's it. No apologies. No limits. Just a spark meant to haunt your dreams, burning forever in the digital void. A giant zero, that we see as one.

Welcome to the existence. Click to be.
